

How to escape the stimulireader-trap in humour research?

Dr. Matthias Springer

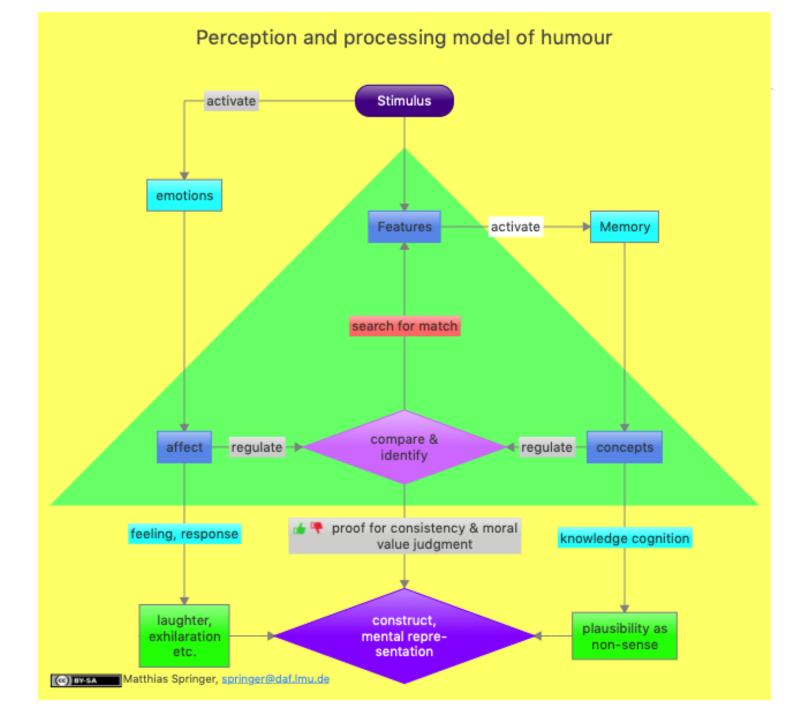

Prelimeries

- → There does not seem to be a satisfactory answer to this question.
- Asking people about their heuristic theory of humor they always will answer that it is highly dependent from cultur, values and knowledge of the subject
- This means: Humour is a personality trait of man and not a matter of an object
- → But: Some objects causes the humor effect and other don't
- There are theories which describe the texture and figure of objects which intent to cause a humour effect and explain how it works
- → Just as we can observe objects which intent the humor effect but they will fail
- → The challenge is: Presenting something humorous to recipients is always a bet on their response.
- There is a tension between the objectivity of the stimuli and the subjectivity of the recipient
- → Hence we need models of humour which consider both: The objectivity of the stimuli and the subjetivity of the recipient

Modelling the Humour Process

- 1. Emotions activate memory and direct attention to the stimulus
- 2. Cognitive skills are necessary to compare the stimulus with conecpts and to detect its construction as "humorous".
- 3. The recipient must have volational capacity and will to acept the humour and her or his affective responses as laughter and exhilaration.

Model refers to a concept of competence

Cognitive, emotional and volitional aspects in my model point to a model for humour competence:

The ability and the will to percieve humour, to accept it as a special way of representing an entity and to react to it in a more or less physically uncontrolled way.

Model refers to an concept of competence

Kompetenzen sind "die bei Individuen verfügbaren oder durch sie erlernbaren kognitiven Fähigkeiten und Fertigkeiten, um bestimmte Probleme zu lösen, sowie die damit verbundenen motivationalen, volitionalen und sozialen Bereitschaften und Fähigkeiten, um die Problemlösungen in variablen Situationen erfolgreich und verantwortungsvoll nutzen zu können".

(Franz Weinert, 2001: Leistungsmessungen in Schulen, S. 27f.)

A general definition of competence

Competences are "the cognitive abilities and skills available in or learnable by individuals to solve specific problems, as well as the associated motivational, volitional and social dispositions and skills to use the problem solutions successfully and responsibly in variable situations".

(Franz Weinert, 2001: Leistungsmessungen in Schulen, S. 27f.)

Measuring humour as a competence

- → Competence meassurment means a combination of a subject's abilities as a latent construct and the difficulty of the task
- This supports my model of the humour process which consideres both subjetive skills an objective features
- → In my case the task is presented as a potentially humourous stimuli text, cartoon, video which must be detected by the subject
- → Hence you need method which takes into account both the subjective and objetive side
- → The Rasch Model supports this feature

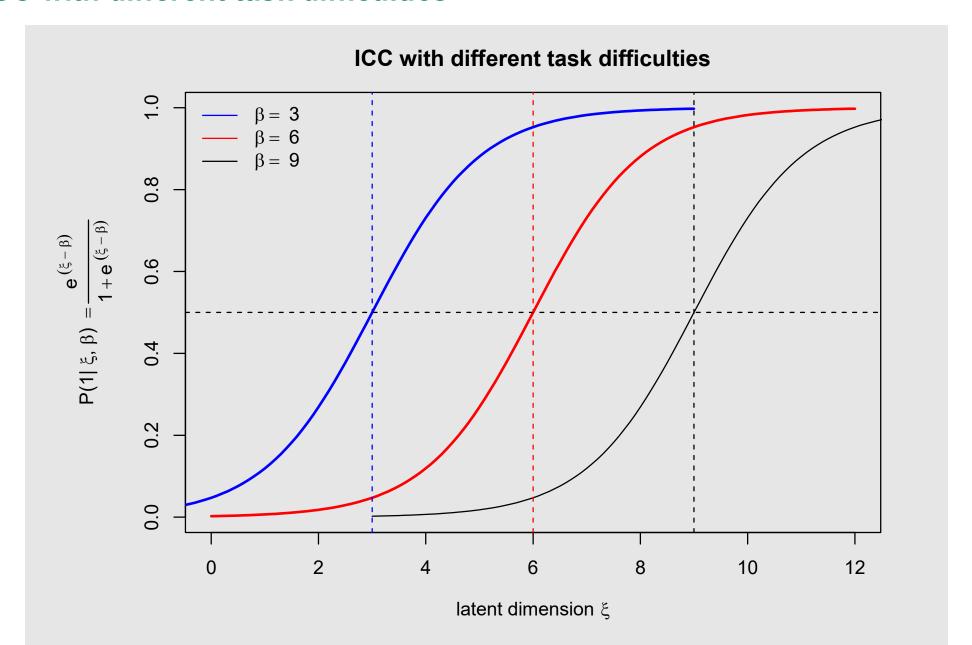

A Brief Introduction to the principles of the Rasch Model

- \Rightarrow A test result is always composed of the ability of the test person (ξ "xi") and the difficulty of the task (β "beta")
- If the ability of the test person exceeds the task difficulty, the probability for the person to solve the task is correspondingly high; this is a positive correlation.
- The same applies the other way round: If the person's ability drops below the level of the task difficulty, the probability of solving the task decreases.
- → The Rasch model can estimate these two parameters, task difficulty and person ability.
- → If the task difficulty and the person parameters correspond, and their difference is equal to zero, then the probability of solving the task is 50 %.
- → This relationship can be represented by the logistic function, its graph depicts the item charachteristc curve (ICC).

ICC with different task difficulties

Item in my questionniare

19. Wie humorvoll finden das Meme "German Kinder"? Wählen Sie einen Smilie aus der Skala, wobei der linke für "absolut humorlos" und der rechte für "absolut humorvoll" stehen.

20. Wie würden Sie die Art von Humor am ehesten beschreiben?

widersinnig, paradox

verspottend, herabsetzend

befreiend, erleichternd, erlösend

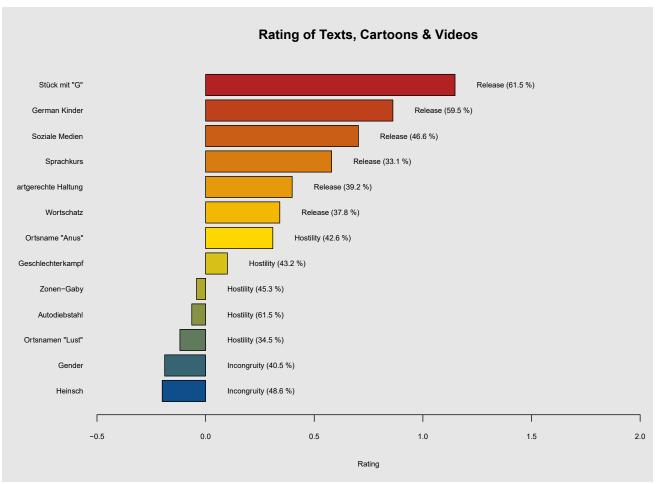

About my study

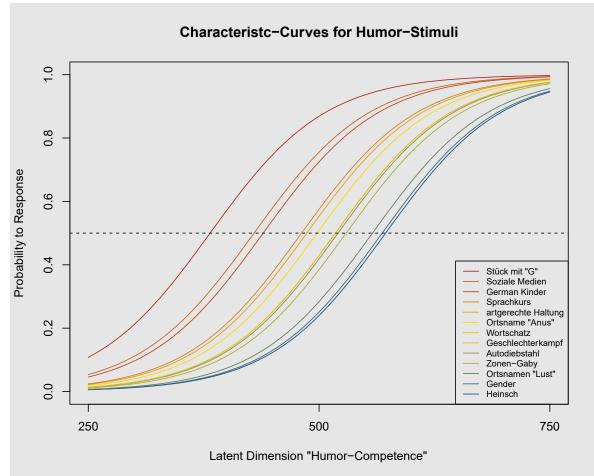

- → 13 randomly selected stimuli: texts, cartoons, videos
- → Rating on a 5-point rating scale (1 not funny at all, 5 absolutely funny), the rating options were offered as emoticons.
- in addition, I asked subjects to classify the stimuli according to a humour theory.
- → Finally, they were able to tell me their age, gender and mother tongue on a voluntary basis.
- → These data were not evaluated.

Results: Rating and Item Charachteristic Curve of the Stimuli: different ranking

Three Stimuli representing low, moderate & high difficulty

- Perfomance with Heinz Erhardt: Only words beginning with the letter "G" are allowed.
- Kind of Stand Up comedy or "Impro-Theater"
- German comedian in the middle of the 20th century
- highest rated, low difficulty
- Humour-Category: "Release"

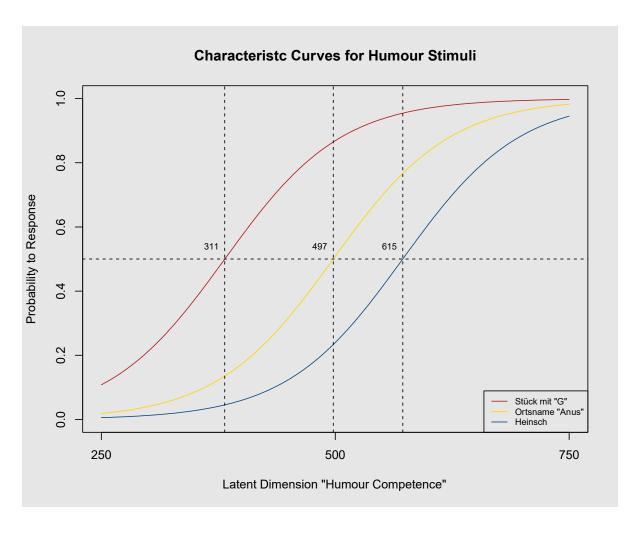

- Meme with the French town name "Anus"
- The text means: The ass of the world is located in France.
- Worldplay with the linguistic concept of homophones
- at the expense of the French
- medium rating, moderat difficulty
- Humour-Category: "Hostility"

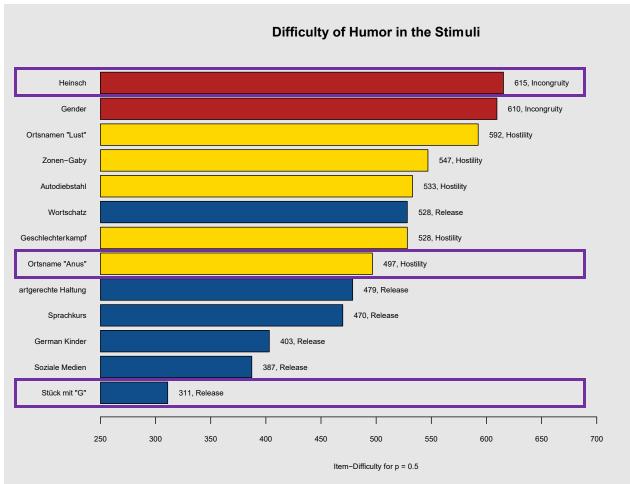

Text
How mathematics came into being
or: On the necessity of extended
administration
By Thomas Heinsch

- Narrative about ants who built neelde hads next to there anthill to make there work countable
- At the end, after n years there were n + 1 anthills, where n is a natural number – and mathematics came into beeing
- Non-sens story with the incongruity between the well organized but stupid work of ants and the highly abstract concept of mathematics
- Incongruity of concepts
- low rating, high difficulty
- Humour-Category: "Incongruity"

ICC of the three stimuli & humour classes

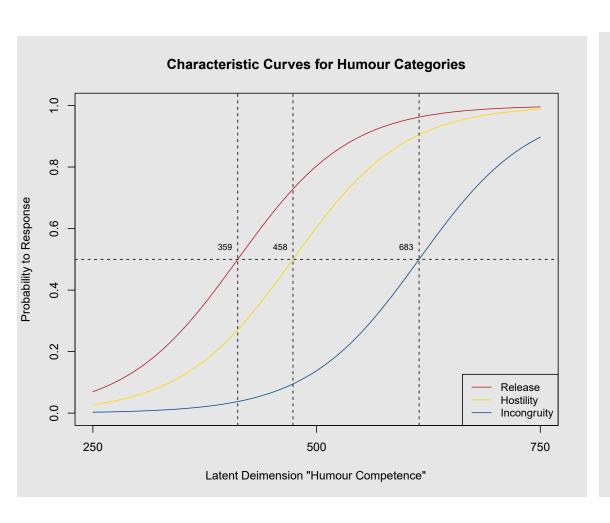

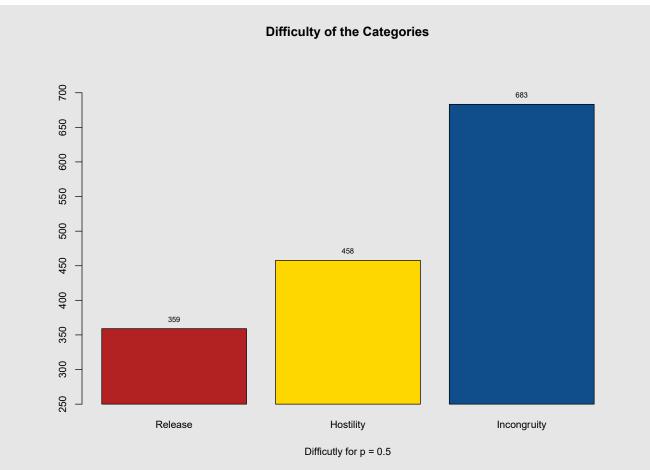

Summery of the theoretical categories of humour (ICC and Difficulty)

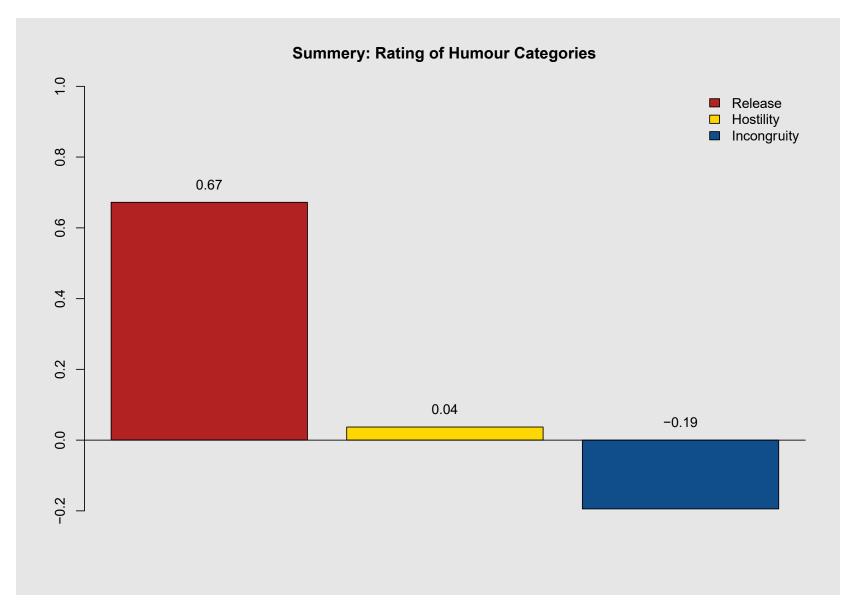

Summery: Rating of the Categories

Standard-Setting: Thresholds for Levels of Humour Competence

| | Randsum me | Humor5 00 | Stimuli | Kat |
|---------------------|---------------|--------------|-----------------------|-----|
| Heinsch | 26 | 615,4 | Heinsch | 1 |
| Genderwitz | 27 | 609,5 | Gender | 1 |
| OrtsnamenD | 30 | 592,5 | Ortsnamen "Lust" | |
| ZonenGaby | 39 | 546,9 | Zonen-Gaby | 2 |
| Autodiebstahl | 42 | 532,9 | Autodiebstahl | 2 |
| Geschlechterka mpf | 43 | 528,2 | Geschlechterka mpf | 2 |
| Wortschatz | 43 | 528,2 | Wortschatz | 3 |
| OrtsnameAnus | 50 | 496,6 | Ortsname "Anus" | |
| ArtgerechteHalt ung | 54 | 478,7 | artgerechte 3 | |
| Sprachkurs | 56 | 469,7 | Sprachkurs 3 | |
| GermanKinder | 70 | 403,1 | German Kinder | 3 |
| SozialeMedien | 73 | 387,2 | Soziale Medien 3 | |
| StueckmitG | 85 | 311 | Stück mit "G" | 3 |

≥ 590: high level

≥ 450 moderate level

< 450 low level

Levels correspond with the categories of humour:

| Kat_E | Humor500 | |
|-------------|----------|--|
| Incongruity | 683.2 | |
| Hostility | 457.8 | |
| Release | 359,0 | |

Personal Parameter ξ – the individual competence to perceive a stimulus with humour

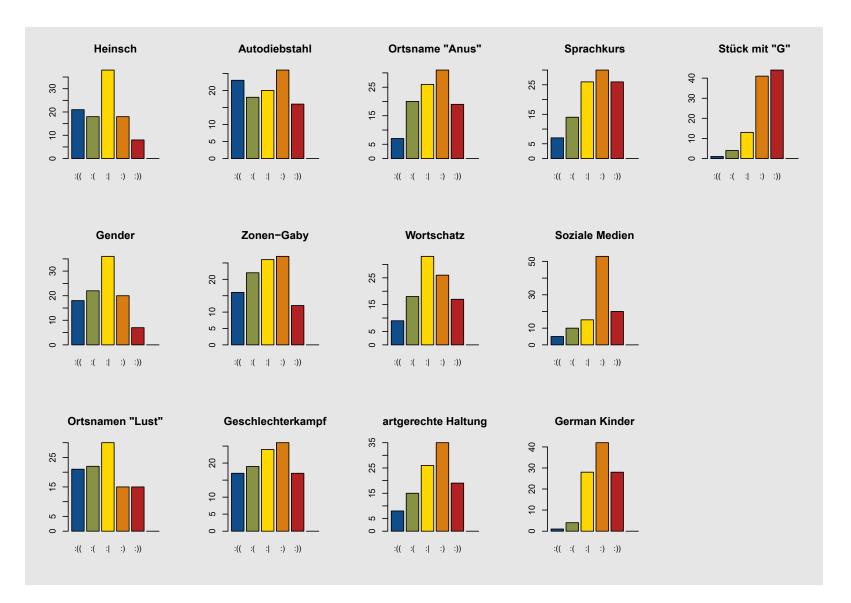

| Competence Level | Score |
|------------------|-------|
| high | ≥ 590 |
| moderate | ≥ 450 |
| low | < 450 |

| | P_Ergebnis | Result | |
|----|------------|----------|--|
| 22 | 448 | Low | |
| 25 | 596 | High | |
| 26 | 557 | Moderate | |
| 28 | 218 | Low | |
| 29 | 407 | Low | |
| 31 | 448 | Low | |
| 34 | 521 | Moderate | |
| 37 | 407 | Low | |
| 40 | 694 | High | |
| 48 | 521 | Moderate | |
| 49 | 596 | High | |
| 51 | 521 | Moderate | |
| 52 | 557 | Moderate | |
| 55 | 485 | Moderate | |
| 57 | 304 | Low | |
| 58 | 485 | Moderate | |
| 63 | 407 | Low | |
| 64 | 521 | Moderate | |
| 65 | 485 | Moderate | |
| 66 | 521 | Moderate | |

| | Heinsch | OrtsnameAnus | StueckmitG |
|----|---------|--------------|------------|
| 22 | 15,7 % | 38,0 % | 79,7 % |
| 25 | 45,1 % | 72,9 % | 94,5 % |
| 26 | 35,8 % | 64,7 % | |
| 28 | 1,8 % | 5,8 % | 28,3 % |
| 29 | 11,1 % | 29,1 % | 72,4 % |
| 31 | 15,7 % | 38,0 % | 79,7 % |
| 34 | 28,0 % | 56,0 % | 89,1 % |
| 37 | 11,1 % | 29,1 % | 72,4 % |
| 40 | 68,6 % | 87,8 % | 97,9 % |
| 48 | 28,0 % | 56,0 % | 89,1 % |
| 49 | 45,1 % | 72,9 % | 94,5 % |
| 51 | 28,0 % | 56,0 % | 89,1 % |
| 52 | 35,8 % | 64,7 % | 92,1 % |
| 55 | 21,3 % | 47,0 % | 85,0 % |
| 57 | 4,3 % | 12,7 % | 48,3 % |
| 58 | 21,3 % | 47,0 % | 85,0 % |
| 63 | 11,1 % | 29,1 % | 72,4 % |
| 64 | 28,0 % | 56,0 % | 89,1 % |
| 65 | 21,3 % | 47,0 % | 85,0 % |
| 66 | 28,0 % | 56,0 % | 89,1 % |

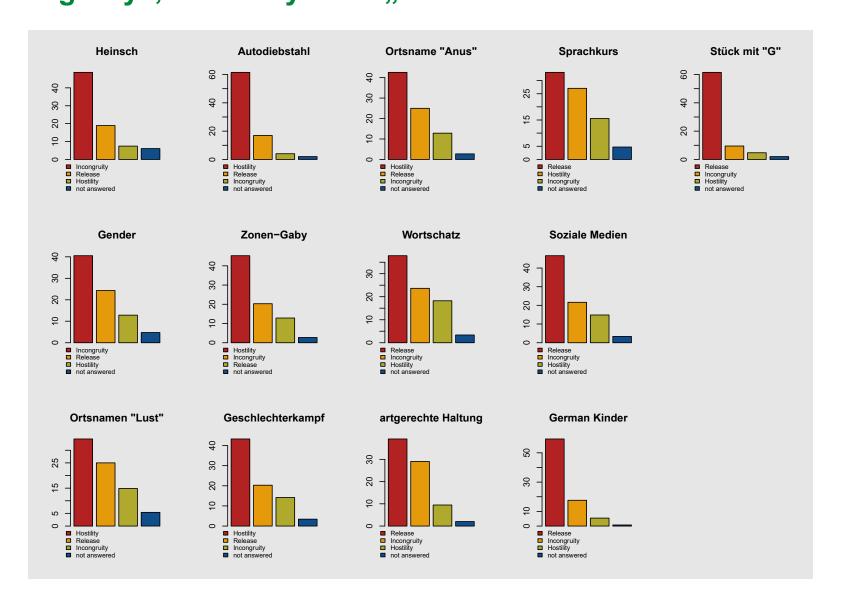

Shortcoming 1 – the 5 point rating sacle: how to handle the middle category "3"? u or not?

Catagories of Homour - a heuristic apporach: Ambiguity in the selection of "Incongruity", "Hostility" and "Release"?

Adjectives were asked to determine the categories:

- contradictory paradoxical
- derogatory disparaging
- liberating, relieving redeeming

Last but not least

I am the fool who tells you how well-developed your humour competence is ...

Thank you for your attention.
