Greek–Arabic–Latin: The Transmission of Mathematical Texts in the Middle Ages

Richard Lorch

Ludwig-Maximilians-Universität München

Argument

During the Middle Ages many Greek mathematical and astronomical texts were translated from Greek into Arabic (*ca.* ninth century) and from Arabic into Latin (*ca.* twelfth century). There were many factors complicating the study of them, such as translation from or into other languages, redactions, multiple translations, and independently transmitted scholia. A literal translation risks less in loss of meaning, but can be clumsy. This article includes lists of translations and a large bibliography, divided into sections.

Much of the achievement in the mathematical sciences in the Islamic Middle Ages was based on translations from Greek made in the ninth century. Our information on the translators must be collected from ascriptions in the manuscripts, references in bio-bibliographical works such as the *Fihrist* (late tenth century), and statements by redactors such as Naṣīr al-Dīn al-Ṭūsī (thirteenth century). Sometimes a work was translated more than once. Among translators active in the mathematical field were Iṣḥāq ibn Ḥunayn and Qusṭā ibn Lūqā. Several mathematical works are represented as being a “correction” (*isḫāḥ*) by the polymath Thābit ibn Qurra (d. 901). With some works the Arabic translation is not identical in content to the extant Greek text. Sometimes this may reasonably be attributed to changes made in Greek before translation, but it must be remembered that the extant Greek manuscripts were mostly written after the translations were made and that the Arabic translators went to some trouble to obtain good manuscripts. Therefore it is likely that for many passages Arabic translations carry a better text than the extant Greek manuscripts.

When in turn Arabic scientific writings came to be translated into Latin, thus beginning or nourishing the resurgence of learning in the twelfth century, the Greek writings in Arabic translation were translated too. Many translations were made by Gerard of Cremona (d. 1187), as we learn from ascriptions in manuscripts and from a list appended to the famous *Vita* presumably written by his pupils. Other, and earlier, translators were Adelard of Bath, John of Seville, Hermann of Carinthia, Robert of Chester, and Plato of Tivoli. In many cases we can only guess the identity of the translator.

The above sketch is a greatly simplified account of the process of transmission. Thus Syriac was often an intermediary between Greek and Arabic. An example is

Archimedes' *Sphere and Cylinder*, in which there is a complaint inserted in the text that the Syriac translator had omitted part of the preliminary material.¹ In the Arabic-Latin transmission a major complicating factor is constituted by Hebrew texts: many texts were translated from Arabic into Hebrew (mostly in the thirteenth and fourteenth centuries); others were originally written in Hebrew; Hebrew texts were translated into Latin and Latin texts into Hebrew. We may note in passing that Arabic texts were sometimes written in Hebrew script. There were also direct translations from Greek into Latin, mostly in Sicily.

Some ideas were transmitted, but it is not known how. For instance, the horary quadrant described by Robertus Anglicus was well known to the Arabs, but whether Robertus had a translation in front of him or whether someone explained its construction and use to him with the help of an actual instrument is not known. In some cases, for example, the "Tūsī couple," it is not known whether the idea was transmitted or rediscovered in the West.

Even in the case of unambiguous translation there are problems. One is the existence of revisions, sometimes by the translator himself.²

In the case of Theodosius' *Sphaerica*³ (first century), there are two Arabic texts that appear to be translations; in each case there exists a similar, but not identical, text – presumably a redaction. One of the putative translations, which is anonymous, was translated into Latin by Gerard of Cremona and the other, apparently the version of Qusṭā ibn Lūqā, was translated into Hebrew by Jacob ben Makhir and/or Moses ibn Tibbon (thirteenth century). In Latin there is a redaction by Campanus (thirteenth century), often coupled with his redaction of the *Elements*, but it is not known whether the base-text was Gerard's or another (lost) translation. The scholia to the *Sphaerica* – of one of which at least eleven forms are known in Arabic or implied by translation – present formidable problems of transmission.

Another example is the transmission of Ptolemy's *Planisphaerium*.⁴ The text itself, which is lost in Greek, was translated by an unknown translator into Arabic; and a Latin translation was made by Hermann of Carinthia – evidently from a recension slightly different from the text carried by the extant Arabic manuscripts.⁵ Extant in Arabic is some material by Maslama al-Majrīṭī (d. 1007–08) relevant to the text: some

¹ See R. Lorch, "The Arabic Transmission of Archimedes' *Sphere and Cylinder* and Eutocius' Commentary" (1989), *Ar. Math. Sci.* ★ I, this on pp. 96, 109. For al-Ṭūsī's comment on the omission, see F. Sezgin, *Geschichte des arabischen Schrifttums*, Leiden, vol. V (1974), p. 128.

² For Gerard's revision of his translation of the *Almagest*, to correct obvious mistakes and to bring the translation nearer the Arabic, see Ptolemäus, *Der Sternkatalog des Almagest*, ed. P. Kunitzsch 1986–1991, vol. II, p. 4, and P. Kunitzsch "Gerard von Cremona als Übersetzer des *Almagest*," in *Festgabe für Hans-Rolf Singer*, ed. M. Forstner, 1991, 338. For the revision, perhaps in the thirteenth century, of Gerard's translation of the *Elements*, see Id., "Findings in Some Texts of Euclid's *Elements*," in *Festschrift für Helmuth Gericke*, Stuttgart 1985, this on p. 120.

³ For details of this example, see R. Lorch, *Math. Prob.* ★, 159–183.

⁴ For details see P. Kunitzsch and R. Lorch, *Maslama's Notes on Ptolemy's Planisphaerium . . .*, 1994.

⁵ One manuscript, in Kabul, has not been examined. The recension used by Hermann is supported by quotations in Maslama's notes (see below).

notes to the text, an Extra-Chapter, and some “Chapters indispensable for whosoever wants to construct an astrolabe.” Hermann translated some of the notes along with the text; a second translator (unknown) translated most of the rest of the notes and the Extra-Chapter; a third translator (also unknown) translated the same notes and a couple more, the Extra-Chapter and the Astrolabe chapters. Presumably, the second and third translators had Hermann’s text in front of them, but their identity and the circumstances of their activity remain unknown. In addition, there exists a Hebrew translation of the *Planisphaerium*, apparently made from Hermann’s Latin.

Sometimes a translator had the help of a native speaker. Thus Gerard worked on the *Almagest* with one Galippus; and in the translation of Avicenna’s *De anima*. Iohannes Avendauth translated the single words into the vernacular and Dominicus Gundisalvus translated these into Latin.⁶ But to what extent such methods were used by others – or even by these translators when working on other texts – is simply not known.

Of the translators from Arabic into Latin Gerard is known for being very literal; Hermann, by contrast, is usually interpretative. The literary defects of a literal translation are obvious, but if an interpretative translator does not understand the text, or does not understand it fully, the result can be worse. This is forcibly expressed by al-Kindī in the introduction to his treatise on the armillary instrument: he says that the Arabic translators of the *Almagest* had difficulties with Ptolemy’s complicated style and feared:⁷

when applying their own ideas to the meanings of his words, that they might slip away from its true sense. [So,] in translating them into Arabic, they clung tightly to the order of the words, giving every word successively its Arabic counterpart and not departing [from their order, or from their literal meanings]. And in order to avoid mistakes they left it to the students of what they had translated of his books and his writings to discover their [sc. the books’] meanings. Not everyone who translated something of his books did this, but [only] people of firm judgement and very good command of Greek – [and this they did] in order not to miss either of these things, viz. the understanding of the meanings of the book and the correct rendering of its [single] words. For a man willing to elucidate meanings translates his [own] views without understanding the meanings of that [sc. the text] and thus meets both things: to miss the meanings and to miss the words as well. In this there lies for those who study the[se] people’s translation a loss in understanding aright something of the idea of the book’s author. But whoever repeats its [i.e. the book’s, or his, the author’s] words as they stand – even if it is difficult to understand them – will strike the right understanding of the thoughts of the book’s author, even if this be reached with pains. (Celentano 1982, 21)

⁶ See P. Kunitzsch *Der Almagest. Die Syntaxis Mathematica des Claudius Ptolemäus in arabisch-lateinischer Überlieferung*, 1974, pp. 85–86.

⁷ I am grateful to Prof. Kunitzsch for allowing me to reproduce our joint translation, which depends in several places on readings different from Celentano’s text.

The “pains” will be recognized by anyone who has struggled with Gerard’s literalisms. An example of these is the description of the 25th star in Ptolemy’s constellation Draco: “*Declivior duarum que sequuntur istas ex eis que sequuntur occidentem ad septentrionem,*” which means “the more northerly of the two [stars] following those on the western side” (Kunitzsch *Der Almagest* 1974, 106).

In the following tables the texts are given either by the names that appear to be well established or by descriptions. The translators are given as far as evidence allows. In Table 1 and Table 2 most of the mathematical and astronomical texts translated from Greek into Arabic are listed. The first table contains the *Elements*, the Middle Books and the *Almagest* and the second table contains the rest. Texts marked with an asterisk are lost in Greek. A name in brackets refers to a translation that survives only in fragments or not at all. A name appearing after an oblique stroke refers to the redactor or improver. A question mark before a personal name means that it is not certain if the person translated the work in question. A question mark in brackets means that the translator of the work is not known. A dash in the third column means that there is no known translation of the work into Latin. In Table 3 are listed the works originally written in Arabic that were translated into Latin. Table 4 contains the direct translations from Greek into Latin.

Table 1: Greek Mathematical Works Translated into Arabic

Work	Tr. into Ar.	Tr. into Latin

Archimedes, <i>De insidentibus aquae</i>	}

BIBLIOGRAPHY

Introduction

The aim of this bibliography is to give to somebody coming new to the subject some indication of the literature on the transmission of the mathematical sciences. With a few exceptions there are no references to the transmission of other sciences: there is almost nothing here on medicine, astrology, or philosophy. No doubt an argument could be made for including almost any book on the exact sciences in the Middle Ages, be it text or study, but here only editions of medieval texts and studies closely connected with translation are normally included. However, some of the entries in section 8, which otherwise contains items difficult to place elsewhere, are standard references which “every schoolboy knows,” but which the beginning student may not. For an introduction to medieval mathematics and astronomy the reader is referred to Professor Sezgin’s *GAS* and for medieval western mathematics to Dr. H. L. L. Busard’s forthcoming compendious treatise on the subject. In general the literature indicated in *GAS* is not mentioned in this bibliography – this applies particularly to section 1.

In each section (except 6 and 8) the order of items is basically alphabetical by last name of the modern author, but in sections 1 and 2 this is altered so that items on

⁹ Translations made in the ancient world, e.g. Cicero’s translation of Aratus’ *Phaenomena*, are not included. The Euclid items and the *Almagest* seem to have been translated in Sicily in the third quarter of the twelfth century. *De ysoperimetris* was apparently translated in Sicily or South Italy in the last quarter of the century.

one ancient author or medieval translator are put together in a sequence; in section 1 the name of the author is to be found in the main alphabetical order of the section. An asterisk (★) after a short title refers the reader to section 6, Volumes of Collected Papers.¹⁰

7) General

- Magnus, Albertus. 1977. *Speculum astronomie*, edited by S. Caroti, M. Pereira and S. Zamponi. Quaderni di storia e critica della scienza, NS 10. Domus Galileiana.
- Birkenmajer, A. 1970. “La Bibliothèque de Richard de Fournival”. In *Etude d'histoire des sciences et de la philosophie du moyen âge: Studia Copernicana I*:118–210. Originally published in Polish in 1919.
- Burnett, Ch. S. F. 1984. “The Contents and Affiliation of the Scientific Manuscripts Written at, or brought to, Chartres in the time of John of Salisbury”. In *The World of John of Salisbury*, edited by M. Wilkes. Oxford: Blackwell.
- Chevalier, U. [1905–07] 1960, 1975. *Répertoire des sources historiques du moyen âge, Bio-bibliographie*, 2 vols. New York: Kraus Reprint Corp.
- Clagett, M. 1964, 1976–1984. *Archimedes in the Middle Ages*, 5 vols. Madison: University of Wisconsin Press (vol. I), Philadelphia: American Philosophical Society.
- Duhem, P. 1913–1959. *Système du monde*, 10 vols. Paris: Libraire scientifique A. Hermann et fils.
- Folkerts, M. 1989. “Euclid in Medieval Europe”. *Questio de rerum natura* 2.
- Folkerts, M. 1993. “Arabische Mathematik im Abendland unter besonderer Berücksichtigung der Euklid-Tradition”. In *Die Begegnung des Westens mit dem Osten*: Kongreßakten des 4. Symposiums des Mediävistenbandes in Köln 1991.
- Kunitzsch, K. 1966. *Typen von Sternverzeichnissen in astronomischen Handschriften des zehnten bis vierzehnten Jahrhunderts*. Wiesbaden: Harrassowitz.
- Kunitzsch, K. 1974. *Der Almagest. Die Syntaxis Mathematica des Claudius Ptolemäus in arabisch-lateinischer Überlieferung*. Wiesbaden: Harrassowitz.
- Kunitzsch, K. 1977. *Mittelalterliche astronomisch-astrologische Glossare mit arabischen Fachausdrücken*. Bayerische Akademie der Wissenschaften, Phil.-Hist. Kl., Sitzungsberichte, Jg. 1977, Heft 5, Munich.
- Kunitzsch, K. 1983. *Glossar der arabischen Fachausdrücke in der mittelalterlichen europäischen Astrolabliteratur*. Akademie der Wissenschaften in Göttingen, I Phil.-Hist. Kl., Nachrichten, Jg. 1982, Nr. 11.
- Kunitzsch, K. 1984. “Remarks regarding the terminology of the astrolabe”. *Zeitschrift für Geschichte der Arabisch-Islamischen Wissenschaften* 1:55–60. Reprinted in *Arabs-Stars** VIII.
- Kunitzsch, P. 1991–92. “Letters in Geometrical Diagrams, Greek-Arabic-Latin”. *Zeitschrift für Geschichte der Arabisch-Islamischen Wissenschaften* 7:1–20.

- Matvievskaja, G. P. and B. A. Rozenfel'd. 1983. *Matematiki i astronomy musul'manskogo Srednevekov'ja i ich trudy VII-XVII veka*, 3 vols. Moscow: Nauka.
- McVaugh, M. 1971 "Fulbert of Chartres' Notes on Arabic astronomy". *Manuscripta* 17:172–177.
- Pouille, E. "Le vocabulaire de l'astronomie planétaire du XIIe au XIVe siècle". *Diffusione*,* 193–212.
- Ptolemy. 1986–1991. *Claudius Ptolemäus: Der Sternkatalog des Almagest. Die arabisch-mittelalterliche Tradition*, ed. P. Kunitzsch, 3 vols. Wiesbaden: Harrassowitz.
- Richard of Wallingford 1976. *Richard of Wallingford. An edition of his writings with . . . commentary by J. D. North*, 3 vols. Oxford: Oxford University Press.
- Rozenfel'd, B. 1966. "Arabskie i persidskije fiziko-matematicheskie rukopisi v bibliotekakh Sovetskogo Sojuza". *Fiziko-matematicheskie Nauki v stranach Vostoka* 1:256–289.
- Sarton, G. 1927–48. *Introduction to the History of Science*, 3 vols. Baltimore: Carnegie Institute of Washington.
- Sezgin, F. 1967–. *Geschichte des arabischen Schrifttums*. Leiden: E. J. Brill 1967–: Vol. V (1974) mathematics; vol. VI (1978) astronomy. Leiden: Brill vol. VII (1979), on astrology and meteorology, has Nachträge to vols. V and VI on pp. 400–415.
- Suter, H. 1902. "Die Mathematiker und Astronomen der Araber und ihre Werke". *Abhandlungen zur Geschichte der mathematischen Wissenschaften* 10.
- Suter H. 1902. "Nachträge und Berichtigungen zu 'Die Mathematiker und Astronomen der Araber und Ihre Werke'". *Abhandlungen zur Geschichte der mathematischen Wissenschaften* 14:155–85. The last two items have been repr. inter al. in Frankfurt 1986. See also H. P. J. Renaud. 1932. "Additions et corrections à Suter 'Die Mathematiker . . .'". *Isis* 18:166–183.
- Thorndike, L. 1923–58. *A History of Magic and Experimental Science*, 8 vols. New York: Macmillan (vols. I-II); New York: Columbia University Press (vols. III-VIII).
- al-Ṭūsī. 1940–41. *Nasīr al-Dīn al-Ṭūsī, Majmū' rasā'il*, 2 vols., Hyderabad: Osmania Oriental Publications Bureau. Most items are his *tahrīr*s of the Middle Books and of Archimedes. His *tahrīr*s of the *Elements* and the *Almagest* must be consulted in manuscript.
- Weijers, O. 1990. *Méthodes et instruments du travail intellectuel au moyen âge*, CIVICMA, *Etudes sur le vocabulaire intellectuel du moyen âge* III. Turnhout: Brepols.
- Wickersheimer, E. 1936. *Dictionnaire biographique des médecins en France au Moyen Age*, 2 vols. Paris 1936.

8) Manuscripts (References are to sections 5 and 7 above)

- Arabic MSS: See – in section 7 – Sezgin, Suter, G. P. Matvievskaya and B. A. Rozenfel'd, B. A. Rozenfel'd; and – in section 5 – Goldstein ("The Survival."), Langermann ("Transcriptions . . ." particularly for Arabic MSS in Hebrew script), Steinschneider, *Heb. Üb.* and *Zur Pseudepigraphischen Literatur*.
- Brockelmann, C. 1943–49, 1937–42. *Geschichte der arabischen Litteratur*, 2nd ed., 2 vols. Leiden: E. J. Brill; Supplementband, 3 vols. Leiden: E. J. Brill.
- Krause, M. 1936. "Stambuler Handschriften islamischer Mathematiker". *Quellen und Studien zur Geschichte der Mathematik, Astronomie und Physik*, Abt. B, 3, Heft 4.
- Latin MSS: for mathematical and some astronomical MSS there is a databank in the Munich IGN. See also Thorndike, *History of Magic . . .*, and Duhem (both section 7);
- Carmody, F. J. 1956. *Arabic Astronomical and Astrological Sciences in Latin Translation*. Berkeley and Los Angeles: University of California Press. There is a copy annotated by F. Benjamin in the Institut für Geschichte der Naturwissenschaften, Munich.
- Lindberg, D. C. 1975. *A Catalogue of Medieval and Renaissance Optical Manuscripts*. Toronto: The Pontifical Institute of Medieval Studies.

- Thorndike, L. and P. Kibre. 1963. *Catalogue of Incipits of Mediaeval Scientific Writings in Latin*, 2nd ed. London: The Mediaeval Academy of America. Supplements in *Speculum* 40 (1965):116–122 and 43 (1968):78–114.
- Zinner, E. 1925. *Verzeichnis der astronomischen Handschriften des deutschen Kulturgebietes*, 1925. There is a copy annotated by Zinner himself in the Institut für Geschichte der Naturwissenschaften, Frankfurt, and a photocopy in the Institut für Geschichte der Naturwissenschaften, Munich. The annotations are sometimes hard to read.
- Hebrew MSS: at the Hebrew University of Jerusalem there is an Institute of Microfilmed Hebrew Manuscripts, which has information on (and films of) many manuscripts not to be found in the usual bibliographies. These latter include Steinschneider, Heb. Ueb. (see section 5) and:
- A. Freimann, 1964–73. *Union Catalog of Hebrew Manuscripts and their Locations*, 2 vols., New York: American Academy for Jewish Research.
