## GENERAL CONTENTS

### Volume I

1. Excitation Energy Transfer	1
2. Primary Reactions	89
3. Oxygen Evolution	227
4. Photosynthetic Electron Transport I: Plants and Algae	399
5. Photosynthetic Electron Transport II: Photosynthetic Bacteria	621
6. Physical Parameters; Special Methods; Model Systems	677

### Volume II

1. Pigment and Pigment-Protein Complexes	1
2. Reaction Center and Light-Harvesting Complexes I: Plants, Algae and Cyanobacteria	73
3. Reaction Center and Light-Harvesting Complexes II: Photosynthetic Bacteria	153
4. Membrane Potentials and Ion Gradients	233
5. Membrane Bioenergetics; Membrane Transport	371
6. Coupling Factors and ATPase	477
7. Cyanobacteria	625
8. Photosynthesis and Solar Energy Technology	727

### Volume III

1. The Architecture of Photosynthetic Membranes I: General; Envelope Membranes; Membrane Fluidity; Stacking	1
2. The Architecture of Photosynthetic Membranes II: Membrane Proteins and Lipids	91
3. The Architecture of Photosynthetic Membranes III: Photosystem Particles; Electron Transport Components	195
4. The Architecture of Photosynthetic Membranes IV: Dynamic Aspects	263

## **VI**

5. The Architecture of Photosynthetic Membranes V: Prokaryotic Membranes	335
6. Carbon Metabolism I: Metabolic Pathways; Metabolites; Enzymes	381
7. Carbon Metabolism II: Regulation, Induction and Activation; Transport	557
8. Ribulose Bisphosphate Carboxylase/Oxygenase	717
9. Photorespiration; Amino Acid Synthesis; Nitrogen Metabolism	811

## **Volume IV**

1. Herbicides	1
2. The Productivity of Photosynthesis	85
3. Environmental Influences on Photosynthesis	181
4. Photosynthesis under Stress Conditions	345
5. Molecular Genetics of the Photosynthetic Apparatus	483
6. Chloroplast Development	595
7. Light-Controlled Development of the Photosynthetic Apparatus	783

## CONTENTS TO VOLUME III

Preface	XXV
In Memory of Kazuo Shibata	XXVII
Sponsors	XXIX
International Photosynthesis Committee 1980–1983	XXX
Local Organizing Committee	XXXI
1. The Architecture of Photosynthetic Membranes I: General; Envelope Membranes; Membrane Fluidity; Stacking	
Molecular Organization of Chloroplast Thylakoid Membranes J. Anderson	1
Orientation of Photosynthetic Pigments in vivo: Structural and Functional Aspects J. Breton	11
Comparative Photochemical and Electrochemical Properties of Thylakoids, Stromal Lamellae, Inside-in and Inside-out Vesicles (Granal and Randomized) S. Phung-nhu-Hung, F. de Kouchkovsky, Y. de Kouchkovsky	19
Structural Relations between Endoplasmic Reticulum/Plastid Envelope and Protein Import J. Brangeon, A. Forchioni	23
Preparation and Characterization of Membrane Fractions Enriched in Outer and Inner Envelope Membranes from Spinach Chloroplasts M. Block, A. Dorne, J. Joyard, R. Douce	27
Isolation and Characterization of Outer and Inner Chloroplast Envelope Membranes of Spinacia oleracea J. van 't Riet, F. Kemp, P. Abraham	31
Temperature-induced Changes in the Structure and Function of Pea Chloroplasts and their Relation to Chloroplast Membrane Organisation P. Thomas, P. Quinn, W. Williams	35

## **VIII**

Composition and Functions of Chloroplast and Thylakoid Membranes Affected by Digitonin and Glutaraldehyde D. Kafalieva, E. Apostolova	39
In situ Separation of Pigment Systems Using Iudicious Alterations of the Thylakoid Membrane G. Harnischfeger, M. Schiawsky	43
Two Mechanisms of Freeze-thaw Inactivation of Thylakoid Membranes D. Hincha, J. Schmidt, U. Heber, J. Schmitt	47
Relationship between Thylakoid Membrane Fluidity and the Kinetics of Salt Induced Fluorescence Changes: a Spin Label Study J. Pedersen, R. Cox	51
Transverse and Lateral Heterogeneity in Membrane Fluidity in Thylakoids, Galactolipid Vesicles and an Oxygen-evolving Photosystem II Preparation S. Berg, C. Waggoner, H. Aronson, J. More	55
Complexity and Entropy Changes in the Photosynthetic Apparatus during Floral Induction of Spinach Plants H. Greppin, R. Strasser	59
All-granal Chloroplasts of Apple-fruit C. Phan	63
Selective Thylakoid Protein Damage and Repair during Photoinhibition D. Kule, I. Ohad, R. Guy, C. Arntzen	67
Electron Transfer Reactions Involving Plastoquinone in Stacked and Unstacked Thylakoids L. Olsen	71
Increased Stacking Capacity by Modified Thylakoid Surfaces L. Mustárdy	75
Light Scattering, Fluorescence Yield and Membrane Stacking Changes due to Divalent Removal from Stacked Thylakoids F. Garlaschi, P. Gerola, R. Jennings, G. Forti	79
Electron Transport, Photophosphorylation and Thylakoid Stacking W. Chow	83
Changes in the Absorbance of Chlorophylls and Fluorescence of Atebrin in Senescing Chloroplasts N. Choudhury, U. Biswal	87

## 2. The Architecture of Photosynthetic Membranes II: Membrane Proteins and Lipids

Lateral Heterogeneity of Proteins and Lipids in the Thylakoid Membrane and Implications for Electron Transport J. Barber	91
Chlorophyll-protein Complexes of Higher Plants: Protein Phosphorylation and Preparation of Monoclonal Antibodies J. Bennett, R. Williams, E. Jones	99
The Effect of Polar Thylakoid Lipids on Oxygen Evolution K. Gounaris, D. Whitford, J. Barber	107
The Role of Acyl Lipids in the Function and Molecular Organisation of Photosynthetic Membranes D. Murphy, I. Woodrow	111
Studies on the Distribution of Galactolipids across the Thylakoid Membrane Using Thylakoid Vesicles of Normal and Everted Sidedness C. Sundby, C. Larsson	115
Changes in Chlorophyll-protein Complexes of Bean Galactolipase or Phospholipase A2, C and D-treated Thylakoid Membranes Z. Krupa	119
Lipid-protein Interactions in the Thylakoid Membranes of Higher Plant Chloroplasts W. Williams, K. Gounaris, P. Quinn	123
The Lipid Phase of Photosynthetic Membranes N. Murata	131
Chlorobium Aminolipid: a new Membrane Lipid from Green Sulfur Bacteria J. Olson, E. Shaw, J. Gaffney, C. Scandella	139
Mode of Organization of Galactolipids: a Conformational Analysis R. Brasseur, J. de Meutter, J. Ruysschaert	143
Regulation of the Galactolipid Synthesis in Spinach Chloroplasts J. Wintermans, G. Bögemann, J. Heemskerk	147
Serological Investigations on the Function of Phospholipids in the Thylakoid Membrane A. Radunz	151
Turnover of Galactolipids Incorporated into Chloroplast Envelopes J. Heemskerk, G. Bögemann, J. Wintermans	155
Lateral Heterogeneity of Polar Lipids in the Thylakoid Membranes of Spinach Chloroplasts J. Barber, K. Gounaris, C. Sundby, B. Andersson	159

**X**

Time Resolved Anisotropy Decay of Diphenylhexatriene in Isolated Thylakoid Lipid Dispersions P. Millner, R. Mitchell, D. Chapman, J. Barber	163
Polar Lipids in Spinach Leaf Mitochondria K. Edman, I. Ericson	167
Monoclonal Antibodies to Chlorophyll A-protein 1 in Barley G. Høyer-Hansen	171
Polypeptide Composition of Mesophyll Chloroplast Envelopes from C4 Subgroup Representatives J. Foster, G. Edwards	175
Proteolysis of Chlamydomonas Reinhardi Y-1 Thylakoid Polypeptides M. Wettern	179
Chloroplast Proteins Related to Photosystem II in Chlamydomonas Reinhardtii: Mutants and Trypsin-treated Chloroplast Particles J. Garnier, J. Maroc	183
On the Lateral Distribution of Thylakoid Phosphoproteins U. Larsson, B. Jergil, C. Larsson, H. Åkerlund, B. Andersson	187
Changes in Thylakoid Peptide Composition and Phosphorylation in Differentiated Chloroplasts of Mesophyll and Bundle Sheath Cells of Maize G. Schuster, I. Ohad	191

### 3. The Architecture of Photosynthetic Membranes III: Photosystem Particles; Electron Transport Components

Organization, Structure and Function of the Photochemical Apparatus in Phycobilin and Chlorophyll B-containing Oxygen-evolving Photosynthetic Organisms A. Melis, A. Manodori, M. Ghirardi	195
Salts and pH as Probes of the Organization of the two Photosystems M. Richter, J. Johnson, P. Homann	199
Separation of the Photosystems with Retention of their Photochemical Activities L. Henry, B. Möller	203
Location of the Manganese Component of Freeze-fractured Photosynthetic Membranes D. Simpson, S. Robinson	207
Structure and Functional Studies of an Oxygen-evolving Photosystem II Preparation E. Lam, B. Baltimore, W. Ortiz, A. Melis, R. Chain, R. Malkin	211

Detergent-extracted O <sub>2</sub> -evolving Photosystem II Preparations are Appressed Membranes M. Seibert, S. Berg, P. Ogilvie, T. Goodman Dunahay, L. Staehelin	215
Electron Microscopic Characteristics of Photosystem II Preparations and Their Inactivation and Reactivation with Respect to Oxygen Evolution B. Möller, P. Høj, L. Henry	219
Isolation of Inside-out Thylakoid Vesicles with Increased Photosystem II Purity-lateral Index of Thylakoid Components B. Andersson	223
Cation Control of Photosystem II Electron Donation Reactions N. Packham, K. Wilson, J. Barber	227
Quantitative Determination of the Electron Transport Complexes in the Thylakoid Membranes of Spinach and Several Other Plant Species J. Whitmarsh, D. Ort	231
Influence of Structural Properties of the Thylakoid Membrane on the Rate of Q-oxidation C. Scoufflaire, R. Lannoye	235
The Accessibility of Chloroplast Cytochromes in Inside-out and Right-side-out Thylakoid Vesicles to Trypsin R. Mansfield, D. Bendall	239
Organization and Function of Photosynthetic and Respiratory Cytochrome b/c-FeS Complexes G. Hauska, E. Hurt, N. Gabellini, J. Davenport, W. Lockau	243
Reconstitution of Cytochrome f/b6 and ATP Synthetase Complexes E. Mörschel, L. Staehelin	251
The Irradiance Dependent Control of the Q-B-polypeptide Turnover is a Widespread Phenomenon in Oxygenic Photosynthesis E. Šetlíková, J. Masojídek, L. Nedbal, I. Šetlík	255
Irradiance Dependent Changes in Photosystem II Caused by Chloramphenicol and Uncouplers in Photosynthesizing Cells I. Šetlík, L. Nedbal, J. Masojídek, E. Šetlíková	259
4. The Architecture of Photosynthetic Membranes IV: Dynamic Aspects	
Simulations of State Changes in the Photosynthetic Apparatus R. Strasser, R. Hagner	263
Thermodynamically Forced State Changes in Chloroplasts R. Strasser	267

## XII

Evidence for Spill Over Changes during State 1 to State 2 Transition in Green Leaves	271
F. Lombard, R. Strasser	
Changes in the Photochemical Activities of Thylakoids during Phosphorylation of the Light Harvesting Complex	275
B. Solis, R. Strasser	
Energy Distribution Changes during Phosphorylation of the Light Harvesting Complex in Thylakoids	279
G. Tsala, R. Strasser	
Light Independent Phosphorylation of the Chlorophyll A/b-protein Complex in Thylakoids of the Prokaryote Prochloron	283
G. Schuster, G. Owens, Y. Cohen, I. Ohad	
Studies on the Control of Excitation Energy Distribution between the Two Photosystems in Pea Thylakoids by $Mg_2^+$ and LHCP-phosphorylation	287
A. Telfer, J. Barber, H. Bottin, P. Mathis	
Temperature-induced Changes in the Distribution of Excitation Energy between Photosystem I and Photosystem II in Spinach Leaves	291
E. Weis	
State I/State II and Dark Adaptation in Green and Blue-green Algae	295
M. Catt, K. Saito, W. Williams	
Regulation of Light Harvesting Chlorophyll a/b Binding Protein (LHCP) Phosphorylation in Intact Maize Mesophyll Chloroplasts	299
P. Fernyhough, P. Horton, C. Foyer	
Mechanism of the Light State Transition in <i>Porphyridium cruentum</i>	303
J. Biggins, C. Campbell, L. Creswell, E. Wood	
Energy Coupling between Protein-chlorophyll Complexes in Chloroplasts. The Effect of Membrane Phosphorylation	307
P. Gerola, F. Torti, R. Jennings	
Energy Coupling between Protein-chlorophyll Complexes in Chloroplasts. The Effect of Mg Ions	311
R. Jennings	
Effects of Protein Phosphorylation on the Properties of Thylakoid Membranes	315
M. Black, P. Horton, C. Foyer	
The Role of Light-harvesting Complex Phosphorylation in Mediating the State 1-State 2 Transition: a Re-examination	319
N. Baker, J. Markwell, A. Webber, J. Thornber	
Adenylate Nucleotide Regulation of Thylakoid Protein Phosphorylation	323
J. Markwell, C. Yang, N. Baker, J. Thornber	

A Quantitative Analysis of the Chlorophyll Fluorescence Induction Curve from Pea Leaves M. Bradbury, N. Baker	327
Photoacoustics as a Probe for Photosynthetic O <sub>2</sub> Evolution and Energy Storage in Intact Leaf-distribution of Excitation Energy between PS II and PS I O. Canaani, D. Cahen, S. Malkin	331
 5. The Architecture of Photosynthetic Membranes V: Prokaryotic Membranes	
Topography and Function of the Cytochrome Oxidase in a Cyanobacterium G. Peschek, G. Schmetterer, R. Muchl, W. Nitschmann, M. Riedler	335
Giant Photosynthetic Layers with Intact Water Cleavage Activity-spreading of PS II Complexes from Cyanobacteria B. Meyer, H. Witt	343
Specificity of in vitro Reassociation of Phycobiliproteins and Membranes to Form Homologous and Heterologous Functional Membrane Bound Phycobilisomes D. Kirilovsky, N. Lavintman, D. Ish-Shalom, I. Ohad	347
Isolation of Intact, Detergent-free Phycobilisomes from <i>Griffithsia monolis</i> by Means of Trypsin R. Hiller	351
Protein Sequence Homologies between Portions of the L and M Subunits of Reaction Centers of <i>Rhodopseudomonas capsulata</i> and the 32 KD Herbicide-binding Polypeptide of Chloroplast Thylakoid Membranes and a Proposed Relation to Quinone-binding Sites J. Hearst, K. Sauer	355
Topology of the Thylakoid Polypeptides of <i>Rhodopseudomonas viridis</i> F. Jay, M. Lambillotte, F. Wyss, R. Brunisholz, K. Muehlethaler	361
The Use of Chemical Labels, Proteases and Biophysical Techniques for the Study of the Architecture of the Membrane of the Photosynthetic Bacterium <i>Rhodospirillum rubrum</i> G-9 R. Bachofen, V. Wiemken, R. Ghosh, H. Hauser	365
Hydrophobic Membrane Labeling in Chromatophores of <i>Rhodospirillum rubrum</i> G-9 <sup>+</sup> with Two Carbene Generating Reagents H. Meister, R. Bachofen	369

Arrangement of the Photosynthetic Membrane of <i>Rhodopseudomonas viridis</i> Studied by Electron Microscopy, Image Processing and Immunological Methods W. Stark, F. Jay, W. Kuehlbrandt, I. Wildhaber, K. Muehlethaler	373
The Molecular Topography of the Photochemical Membrane System in the Green Bacterium <i>Chloroflexus</i> R. Fuller, R. Blankenship, R. Feick	377
6. Carbon Metabolism I: Metabolic Pathways; Metabolites; Enzymes	
Flexibility of Chloroplast Metabolism U. Heber	381
Carbon Metabolism in <i>Epidendrum elongatum</i> M. Castrillo, M. Guariquata, A. Calcagno, D. Garcia	391
Carbon and Energy Balance during Continuous Algal Growth G. Reznicek, K. Kreuzberg	395
14-CO <sub>2</sub> Fixation by Barley Pericarps P. Scragg, C. Duffus	399
Varying Photosynthetic Pathway and a C3-C4 Intermediate in Australian Neurachne and its Allies (Poaceae) P. Hattersley, L. Watson, S. Wong	403
Different Metabolic Fate of two Carbons of Glycolate in <i>Euglena gracilis</i> Z A. Yokota, H. Komura, S. Kitacka	407
Carbon Metabolism in a PEP-carboxykinase C4 Plant A. Smith, H. Woolhouse	411
Glycolaldehyde Inhibition of Photosynthetic Carbon Assimilation by Isolated Chloroplasts and Protoplasts R. Sicher	413
Metabolism of Labelled 3-phosphoglycerate with Mesophyll Protoplasts and Purified Mesophyll Chloroplasts from the C4 Plant <i>Digitaria sanguinalis</i> M. Hallberg, C. Larsson	417
Carbon Metabolism and Malate Formation in the CAM Plant <i>Aloe arborescens</i> O. Verbücheln, M. Steup	421
Patterns of CO <sub>2</sub> Metabolism during the Diurnal Cycle of Crassulacean Acid Metabolism M. Kluge	425

Genetic Analysis of Photosynthetic Carbon Pathways W. Ogren, C. Somerville, S. Somerville, R. Spreitzer, M. Spalding, D. Jordan	429
Evidences for the Role of the Chloroplast in Algal Fermentation K. Kreuzberg	437
Rapid Fractionation of Leaves of <i>Zea mays</i> : Contents of Metabolites in Mesophyll and Bundle Sheath Compartments R. Leegood	441
Wax Ester Formation in <i>Euglena gracilis</i> during Anaerobiosis and Photoheterotrophic Growth T. Schneider, C. Borkowski, A. Betz	445
Carbon Assimilation in <i>Anacystis nidulans</i> Grown in Carbon-regulated Chemostats A. Miller, D. Canvin, D. Turpin	449
Inorganic Carbon Utilization by Cyanobacteria G. Espie, K. Gehl, G. Owttrim, B. Colman	457
The Influence of Brassinosteroid, a Growth-promoting Steroidal Lactone, on Development and CO <sub>2</sub> -fixation Capacity of Intact Wheat and Mustard Seedlings P. Braun, A. Wild	461
Localization of Enzymes in Chloroplasts from <i>Chlamydomonas</i> <i>Reinhardtii</i> : Enzymes of Glycolysis, the Oxidative Pentose Phosphate Pathway, and the Citric Acid Cycle U. Klein	465
Isolation and Partial Characterisation of Phosphoenolpyruvate Carboxylase Isolated from Green Leaves of Millet ( <i>Panicum miliaceum</i> CV. <i>unicum</i> ) S. Leblová, J. Mareš	469
The Effect of Metals on Maize ( <i>Zea mays</i> ) Phosphoenolpyruvate Carboxylase Isoenzymes M. Stiborová, S. Leblová	473
The Reversible Acid Dissociation and Deactivation of Phosphoenol- pyruvate Carboxylase from Sorghum Leaves J. Shi, M. Wu, J. Zha, X. Tang, Z. Ye	477
Spinach Leaf d-Glycerate-3-kinase D. Randall, L. Kleczkowski	481
Fructose-2,6-bisphosphate and C4 Plants J. Soll, C. Wötzel, B. Buchanan	485
Fructose 1,6-bisphosphatase of <i>Scenedesmus obliquus</i> R. Powls, J. Houghton, J. Easterby	489

## XVI

Study of Kinetic and Binding Properties of NADPH-malate Dehydrogenase (MDH a) from Spinach Chloroplasts J. Meunier, N. Ferte, J. Buc	493
Localization and Properties of Inorganic Pyrophosphatase of <i>Pennisetum americanum</i> Mesophyll Protoplasts D. Lavergne, A. Hoarau	497
Sucrose Phosphatase in Plants J. Hawker, G. Smith	501
Efficient Purification of Spinach Chloroplastic Sedoheptulose 1,7-bisphosphatase (SBPase). Kinetics Comparison with Fructose 1,6-bisphosphatase (FBPase) B. Gontero, J. Meunier, J. Buc	505
PEP Carboxylase in Legumes, Effect of Nitrogen Nutrition M. Deroche, E. Carayol, M. Babalar, M. Lelandais, V. Sarazin, E. Jolivet	509
Oxaloacetate Translocator in Plant Mitochondria J. Chen, H. Heldt	513
Molecular Properties of the Chloroplast Fructose 1,6-bisphosphatase from <i>Euglena gracilis</i> D. Affolter, P. Schurmann, E. Stutz	517
Membrane-bound Aldolase in Pea Leaf Chloroplasts J. Emmanuel Paul, L. Anderson	521
Membrane-bound Cysteine Oxidases in Spinach, Chlorella, <i>Synechococcus</i> and <i>Rhodopseudomonas</i> A. Schmidt, E. Kramer	525
Molecular Properties of NADP-dependent Malate Dehydrogenase R. Scheibe, K. Fickenscher	529
Ferredoxin-thioredoxin Reductase: Purification and Substrate Requirements M. Droux, J. Jacquot, A. Suzuki, P. Gadal	533
Spinach Leaf Photosynthetic Fructose-1,6-bisphosphatase: Biosynthetic Characteristics A. Chueca, J. Lazaro, J. Lopez-Gorge	539
Chloroplastic Thioredoxins from Spinach J. Buc, M. Rivière, J. Meunier	541
In vivo Activities of Carbonic Anhydrase and PEP Carboxylase J. Holtum, R. Summos, C. Roeske, H. Comins, M. O'Leary	545
The Role of PEP-case in a Cyanobacterium G. Owtram, B. Colman	549

Physical Properties of Glycine Decarboxylase Multienzyme Complex from Pea Leaf Mitochondria G. Sarojini, D. Oliver	553
<b>7. Carbon Metabolism II: Regulation, Induction and Activation; Transport</b>	
CAM: Regulated Photosynthetic Metabolism for all Seasons C. Osmond	557
Regulation of Photosynthetic Carbon Metabolism in Microalgae by Wavelength of Incident Light and by CO <sub>2</sub> Concentration S. Miyachi, T. Hirosawa, M. Tsuzuki	565
Enzyme Regulation in Photosynthesis B. Buchanan	573
Involvement of Cyclic Photophosphorylation in 14CO <sub>2</sub> Fixation in Chloroplasts K. Woo, M. Berger	581
Pool Sizes of Calvin Cycle Intermediates in Chloroplasts as Related to Limitations of Photosynthesis in Leaves K. Dietz, U. Heber	585
Direct Measurement of Enzyme Activities and Inhibition Kinetics within Isolated Asparagus Cells Using a Freeze-thaw Technique A. Fraser, S. Ridley	589
Regulation of Stromal Sedoheptulose Bisphosphatase Activity I. Woodrow, E. Latzko, D. Murphy	593
The Regulation of the Activity of Zea mays Phosphoribulokinase M. Rüffes-Turner, J. Bradbeer	597
Regulation of the Activation of Pyruvate, Pi Dikinase and NADP-malate Dehydrogenase in Maize H. Nakamoto, G. Edwards	601
Regulation of Sucrose Phosphate Synthase Activity in Leaves S. Huber, D. Doehlert, T. Rufty, P. Kerr	605
Regulation of Photosynthetic Sucrose Synthesis by Fructose 2,6-bisphosphate M. Stitt, B. Herzog, R. Gerhardt, B. Kürzel, H. Heldt, C. Cséke, B. Buchanan	609
Regulation of C4 Photosynthesis: Inactivation of Pyruvate, Pi Dikinase From Zea Mais by ADP-dependent Phosphorylation A. Ashton, M. Hatch	613

## **XVIII**

The Regulation of CO <sub>2</sub> Fixation and of Sucrose Synthesis in Plants H. Heldt, A. Gardemann, R. Gerhardt, B. Herzog, M. Stitt, W. Wirtz	617
Regulation of the Synthesis and Breakdown of Fructose-2,6-bis-phosphatase in Leaves C. Cséke, A. Balogh, B. Buchanan, M. Stitt, H. Heldt	625
Regulation of Chloroplast Fructose 1,6-bisphosphatase Activity by the Ferredoxin/Thioredoxin System P. Schürmann, Y. Kobayashi	629
Role of the Ferrodoxin/Thioredoxin System in the Regulation of Photosynthetic Enzymes in a Cyanobacterium C. Sutton, N. Crawford, B. Yee, D. Carlson, B. Buchanan	633
The Effect of ATP on Malate Oxidation by Mung Bean Hypocotyl Mitochondria and by Soluble Malate Dehydrogenase A. Tobin, C. Givan	637
The Regulation of Electron Flow between Cytochrome Oxydase and the Alternative Oxidase in Mitochondria from <i>Panicum miliaceum</i> , a NAD-malic Enzyme Type C4 Plant P. Gardeström, G. Edwards	641
Some Relationship between Photosynthetic Carbon Metabolism and Chlorophyll a Fluorescence D. Walker, M. Sivak, Z. Cerović	645
Induction of Photosynthetic Oxygen Evolution in Spinach Leaves R. Prinsley, R. Heath, D. Walker	653
Fluorescence Induction in a Thylakoid System Reconstituted for Photosynthetic Carbon Assimilation P. Horton, P. Lee, S. Anderson	657
Simultaneous Measurement of CHL a Fluorescence and Photosynthetic O <sub>2</sub> Evolution in Systems of Decreasing Complexity (from the Leaf to the Reconstituted Chloroplast System) M. Sivak, Z. Cerović, D. Walker	661
O <sub>2</sub> and CO <sub>2</sub> Effects on Fluorescence Induction Kinetics of Wheat Leaves C. Genova, J. Gaudillere	665
Changes in Redox State of Cytochromes in Relation to Carbon Assimilation in Isolated Pea Chloroplasts Z. Cerović, M. Plesničar	669
Isolation of Plasma Membrane Vesicles from Leaves of Spinach and Barley, Useful for Studies on Transport of Carbon Assimilation Products P. Kjellbom, C. Larsson	673
Sucrose Efflux from <i>Asparagus officinalis</i> Cells M. Hills, D. Walker	677

A Comparative Study of Inorganic Carbon Transport in Photosynthetic Cells G. Espie, G. Owttrim, B. Colman	681
Regulation of 2-oxoglutarate and Dicarboxylate Transport in Spinach Chloroplasts by Ammonia in the Light K. Woo, U. Flügge, H. Heldt	685
Light Dependent Reduction of Hydrogen Peroxide via the Ascorbate-glutathione Cycle in Intact Spinach Chloroplasts C. Foyer, J. Anderson, D. Walker	689
Reductive Activation <i>in vitro</i> of Chloroplast Fructose-1,6-bisphosphatase L. Rosa	693
Light-dependent Activation of NADP-malate Dehydrogenase and Photo-phosphorylation: Energy Requirements M. Miginiac-Maslow, J. Jacquot, M. Droux	697
Inhibition of the Light Activation of Fructose-1, 6-bisphosphatase and Sedoheptulose-1, 7-bisphosphatase by Osmotic Stress in Isolated Spinach Chloroplasts S. Boag, A. Portis	701
NADPH Linked Activation of Thioredoxin Dependent Enzymes from Spinach Chloroplasts U. Schriek, J. Schwenn	705
Activation and Inhibition of Phosphenol Pyruvate Carboxylase by NaCl A. Shomer-Ilan, D. Moualem-Beno, Y. Waisel	709
Reductive Activation of FBPase within the Chloroplast Stroma R. Slovacek, B. Monahan	713
 8. Ribulose Bisphosphate Carboxylase/Oxygenase	
Avenue to the Pandora's Box of Rubisco T. Akazawa, T. Takabe	717
Some Mechanistic Aspects of Ribulose Bisphosphate Carboxylase G. Lorimer, J. Pierce, S. Gutteridge, J. Schloss	725
Role of the Activation Status of the Ribulose 1,5-bisphosphate Carboxylase in Regulating Photosynthesis R. Jensen, K. Mott, D. Raynes, J. Perchorowicz	735
Chemical and Physical Characterization of the Activation of Ribulose-bisphosphate Carboxylase/Oxygenase M. Donnelly, V. Ramakrishnan, F. Hartman	739

Kinetics of Functional Groups of Ribulose Bisphosphate Carboxylase/Oxygenase	743
C. Paech	
Identification of Ligands of the Activator Cation of Ribulose Bisphosphate Carboxylase	747
H. Miziorko	
Phosphorylated Ligands Alter the Kinetics of $\text{CO}_2/\text{Mg}_2^+$ -activation of Ribulose 1,5-bisphosphate Carboxylase	751
D. Jordan, R. Chollet, W. Ogren	
Effects of Anions on the Activation and Catalytic Properties of Rubisco	755
M. Parry, C. Schmidt, S. Gutteridge, M. Cornelius, A. Keys	
Dissociation of Spinach Ribulose-1,5-bisphosphate Carboxylase by Urea	759
G. Voordouw, S. van der Vies, P. Bouwmeester	
RuBP Carboxylase/Oxygenase Activated with $\text{Cu}_2^+$ and Studied by EPR	763
R. Brändén, T. Nilsson, S. Styring	
Production and Characterisation of Monospecific Antibodies to Ribulose Bisphosphate Carboxylase/Oxygenase Subunit Polypeptides	767
L. Schrader, R. Gene Groat, J. Ostrem	
Oxygenase and Carboxylase Activities of RuBP Carboxylase from Wheat Leaves	771
F. Boyle, A. Keys	
Chromosomal Location of Control of Ribulose Bisphosphate Carboxylase in Seedling Leaves of Wheat	775
A. Jellings, B. Leese, R. Leech	
Ribulose Bisphosphate Carboxylase and Net $\text{CO}_2$ Fixation in Tomato Leaves	779
R. Besford, A. Withers, L. Ludwig	
The Isolation of an Active Site Peptide from Spinach Ribulose Bisphosphate Carboxylase/Oxygenase Modified by Glyoxylate	783
C. Cook, N. Tolbert, F. Hartman	
Crystallisation and Preliminary X-ray Studies of Spinach Ribulose-1,5-bisphosphate Carboxylase/Oxygenase	787
I. Andersson, E. Cedergren, A. Tjäder, C. Brändén	
Maintenance of Ribulose Bisphosphate Carboxylase Activity by Endogenous $\text{Mg}_2^+$ in Soybean Leaf Extracts	791

## PREFACE

The Sixth International Congress on Photosynthesis took place from 1 to 6 August 1983, on the Campus of the "Vrije Universiteit Brussel", in Brussels, Belgium. These Proceedings contain most of the scientific contributions offered during the Congress.

The Brussels Congress was the largest thus far held in the series of International Congresses on Photosynthesis. It counted over 1100 active participants. The organizers tried to minimize the disadvantages of such a large size by making maximum use of the facilities available on a university campus. Most contributions were offered in the form of posters which were displayed in a substantial number of classrooms. The discussion sessions, twice a day, four or five in parallel, took place in lecture rooms in the very vicinity of these classrooms. In this way it was attempted to generate the atmosphere of a small meeting. The unity of the subject Photosynthesis was preserved in the ten plenary lectures, organised in such a way that a general overview of two diverse topics was given every day. In addition, there were the five times four parallel symposia dealing with some sixteen general topics.

Every editor of proceedings of a congress is faced with the problem of editing and arranging the contributions, a problem compounded by the wide diversity and the large number of the 753 manuscripts. This editor did very little in the way of editing the papers: all papers were prepared, camera-ready, by the authors themselves and there was no proof-reading. The main reason for this was the need to ensure speedy publication. The contributions are arranged in four volumes but the Proceedings form one set. Although some attempts were made to bring related topics together in one volume, the volumes I to IV should be seen as a succession of chapters, rather than as volumes in their own right. Thus, artificial and arbitrary subdivisions were avoided. A page limit was imposed in order to prevent oversized volumes.

The contributions are arranged in chapters which have no direct relation to the sessions or symposia in which they were presented. The sole criterium for putting a contribution into a certain chapter was its contents. The contributions offered during the Round Table Discussion on Light-Controlled Development of the Photosynthetic Apparatus, July 29 to 30, 1983 in Antwerp, are also included in these Proceedings. They comprise most of the contents of Chapter 7 of Volume IV.

The early publication date of these Proceedings could not have been realised without the efforts of, and the pleasant cooperation with, Mr. Ad Plaizier of Martinus Nijhoff Publishing House. Thanks are due to all Congress members, whose active participation made the Congress a success and these volumes an important document on the state of photosynthesis research. The very much needed assistance of the Local Organizing Committee is gratefully acknowledged. The Photosynthetic Community is indebted to the "Vrije Universiteit Brussel" for making available its premises, facilities and staff. Thanks are also due to the administrative staff of the Congress: secretaries, hostesses, technicians and the two diligent computer programmers, Mr. W. Dierickx and Mr. B. Philips. Special appreciation goes to Ms Blanche van den Haute for her dedicated work in the preparation and the management of the Congress and her help in editing these volumes.

Brussels, March 1984

FRUCTOSE-2,6-BISPHOSPHATE AND C<sub>4</sub> PLANTS

J. SOLL, C. D. WÖTZEL AND B. B. BUCHANAN  
 Division of Molecular Plant Biology  
 University of California, Berkeley, California 94720

## 1. INTRODUCTION

Fructose-2,6-bisphosphate (Fru-2,6-P<sub>2</sub>) is a regulatory metabolite that functions in determining the route of cytosolic carbon processing in plant cells--i.e., whether sucrose, the most important plant sugar, is synthesized or broken down (Cséke et al., 1982; Stitt et al., 1982). Our laboratory has recently described an enzyme preparation that catalyzes both the synthesis (via fructose-6-phosphate,2-kinase or Fru-6-P,2K) (Eq. 1) and the breakdown (via fructose-2,6-bisphosphatase or Fru-2,6-P<sub>2</sub>ase) (Eq. 2) of Fru-2,6-P<sub>2</sub> in leaves of spinach, a C<sub>3</sub> plant (Cseke,Buchanan, 1983; Cseke et al., 1983).

Both the synthetic and degradatory activities in the spinach preparation are regulated allosterically by key leaf metabolites in a manner consistent with a role for chloroplasts in determining the fate of cytosolic carbohydrate flux in leaf cells.

Because of their differences from C<sub>3</sub> plants, the question arises about the status of Fru-2,6-P<sub>2</sub> in C<sub>4</sub> species. We have, therefore, investigated this problem and now report results on Fru-2,6-P<sub>2</sub> synthesis and function in Zea mays (corn), a classical C<sub>4</sub> species.

## 2. MATERIALS AND METHODS

Previously described methods were used for the growth of corn plants and for preparation of extracts for enzyme fractionation (Nishizawa,Buchanan, 1981) as well as for the isolation of mesophyll and bundle sheath cells by differential grinding (Ghirardi,Melis, 1983). The Fru-6-P,2K/Fru-2,6-P<sub>2</sub>ase preparation was obtained from extracts by polyethylene glycol (0 to 15%) precipitation followed by DE 52 and hydroxyapatite column chromatography. Pyrophosphate-D-fructose-6-phosphate-1-phototransferase (PFP) was isolated from similar extracts by polyethylene glycol (5 to 15%) fractionation followed by DE 52 chromatography. Previously described methods were used for the enzymic assay of Fru-6-P,2K (Cséke,Buchanan, 1983) and for Fru-2,6-P<sub>2</sub>ase (Cséke et al., 1983) with spinach leaf PFP as target enzyme.

## 3. RESULTS AND DISCUSSION

3.1. Regulatory properties of Fru-6-P,2K and Fru-2,6-P<sub>2</sub>ase.--As found for spinach, the Fru-6-P,2K preparation used in these studies contained Fru-2,6-P<sub>2</sub>ase activity (Cséke,Buchanan, 1983). Also as for spinach, Pi increased the activity of corn leaf Fru-6-P,2K by lowering the S<sub>0.5</sub> for its fructose-6-phosphate and ATP substrates; the activation by Pi was reversed by 3-phosphoglycerate (PGA), a metabolite transported counter to Pi by

Sybesma, C. (ed.), *Advances in Photosynthesis Research*, Vol. III. ISBN 90-247-2944-0.

Printed in The Netherlands.

### III.6.486

chloroplasts (Cséke et al., 1983). Fru-6-P,2K was also inhibited by another metabolite transported counter to Pi, viz., dihydroxyacetone phosphate (DHAP). Certain typical intermediates of C<sub>4</sub> photosynthesis (phosphoenolpyruvate, oxalacetate) also inhibited Fru-6-P,2K but others did not (pyruvate, malate). UDP-glucose and sucrose also did not influence the enzyme (data not shown).

The Fru-2,6-P<sub>2</sub>ase present in the preparation had a high affinity for Fru-2,6-P<sub>2</sub>. Activity with this substrate was higher than related sugar phosphates in the physiological ( $\mu$ M) range. In contrast to Fru-6-P,2K, Fru-2,6-P<sub>2</sub>ase showed no requirement for a divalent cation and was inhibited (rather than stimulated) by fructose-6-phosphate. Fru-2,6-P<sub>2</sub>ase was also inhibited by metabolites found to inhibit corn leaf Fru-6-P,2K--i.e., phosphoenolpyruvate, DHAP and PGA. Substances which decreased Fru-2,6-P<sub>2</sub>ase activity but were without effect on Fru-6-P,2K were UDP-glucose, pyruvate and malate (data not shown).

3.2. Cellular localization of Fru-6-P,2K and Fru-2,6-P<sub>2</sub>ase.--The finding of enzymes catalyzing the synthesis and hydrolytic breakdown of Fru-2,6-P<sub>2</sub> raises the question of their cellular location--i.e., whether they are present in the mesophyll or bundle sheath. As shown in Table I, Fru-6-P,2K and Fru-2,6-P<sub>2</sub>ase activities were found to occur mainly if not exclusively in the bundle sheath, suggesting that both the synthesis and degradation of Fru-2,6-P<sub>2</sub> takes place in mesophyll cells.

TABLE 1. Cellular localization of Fru-6-P,2K and Fru-2,6-P<sub>2</sub>ase in corn leaves

Enzyme	Mesophyll	Bundle sheath
Fru-6-P,2K	11.3	1
Fru-2,6-P <sub>2</sub> ase	20	1
Phosphoenolpyruvate carboxylase (mesophyll marker)	300	1
NADP-malate dehydrogenase (mesophyll marker)	8	1
Ribulose-1,5-bisphosphate carboxylase/ oxygenase (bundle sheath marker)	1	4.3

3.3 PFP in corn leaves.--In view of the finding of Fru-6-P,2K and Fru-2,6-P<sub>2</sub>ase in corn leaves, the question arises as to its function. We, therefore, undertook an investigation to determine the cellular distribution and properties of PFP previously reported to be present in corn leaves (Carnal, Black, 1983). We found that corn leaves contain two different PFP isozymes, one in the mesophyll and the other in the bundle sheath (Fig. 1). The enzymes were found to differ in charge, in the ratio of their forward to reverse reactions, and in their regulatory properties, but were similar in other respects examined. Both forms of PFP were activated by Fru-2,6-P<sub>2</sub> ( $A_{0.5} = 0.08 \mu\text{M}$ ), but only the mesophyll enzyme was activated by UDP-glucose and, less effectively, by glucose-1,6-diphosphate (respective  $A_{0.5}$  of 0.05  $\mu\text{M}$  and 0.05 mM).

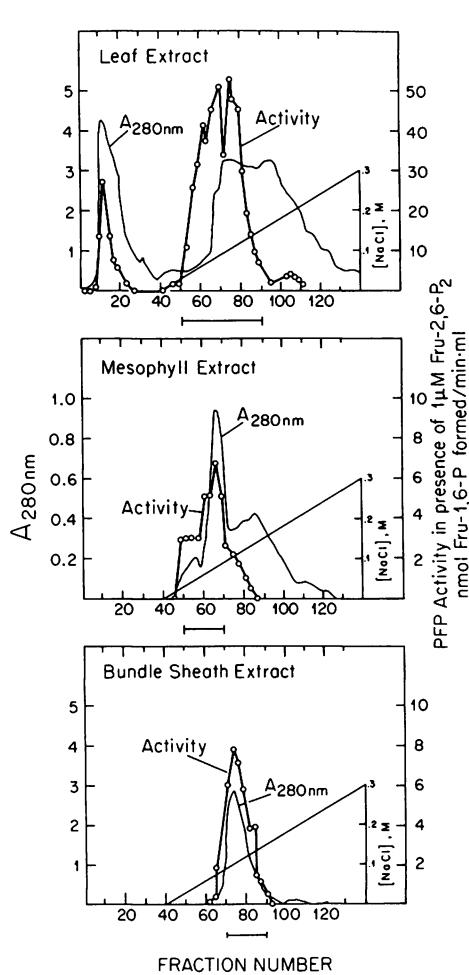

Fig. 1. Demonstration of mesophyll and bundle sheath forms of PFP in corn leaves.

Activation by UDP-glucose was unique in being time dependent (maximal activation was observed after 30 min). Also, it is noteworthy that the reverse reaction (fructose-1,6-bisphosphate hydrolysis) differed from C<sub>3</sub> PFP's in not showing a requirement for P<sub>i</sub> or Fru-2,6-P<sub>2</sub> (C. Cséke, unpublished; Van Schaftingen et al., 1982). It is significant that the rate of the reverse reaction relative to the forward reaction was greater with the bundle sheath than with the mesophyll enzyme. Certain properties of the PFP's from C<sub>3</sub> and C<sub>4</sub> sources are summarized in Table II (next page).

#### 4. CONCLUDING REMARKS

The present results provide evidence that corn leaves contain two different forms of PFP, one in the mesophyll cells that is activated by Fru-2,6-P<sub>2</sub>, and a second in the bundle sheath that is activated by UDP-glucose, glucose-1,6-diphosphate as well as Fru-2,6-P<sub>2</sub>. The PFP isozymes differed in charge and in the ratio of their forward and reverse reaction rates. Because of the confinement of the enzymes catalyzing the synthesis (Fru-6-P,2K) and degradation (Fru-2,6-P<sub>2</sub>ase) of Fru-2,6-P<sub>2</sub> to the mesophyll, it would seem that PFP of the bundle sheath is regulated mainly by UDP-glucose. Thus, whereas the pattern of regulation of Fru-6-P,2K and Fru-2,6-P<sub>2</sub>ase by metabolite effectors seems clear,

## III.6.488

TABLE II. Comparison of PFP's of C<sub>4</sub> and C<sub>3</sub> plants

Property	C <sub>4</sub> (corn)		C <sub>3</sub> (spinach)
	Mesophyll	Bundle sheath	Parenchyma
<u>PFP Forward Reaction</u>			
Stimulation by Fru-2,6-P <sub>2</sub>	+	+	+
K <sub>a</sub> for Fru-2,6-P <sub>2</sub>	0.08 uM	0.08 uM	0.012 uM
Maximal Fru-2,6-P <sub>2</sub> activation	20-X	20-X	30-X
Stimulation by UDP-glucose	-	+	-
K <sub>a</sub> for UDP-glucose		0.15 mM	
Maximal UDP-glucose activation		20-X	
<u>PFP Reverse Reaction</u>			
Stimulation by Fru-2,6-P <sub>2</sub>	-	-	+
Pi requirement	-	-	+
Mg <sup>++</sup> requirement	-	-	+
Hysteretic	+	+	-

the physiological basis for the differential regulation of the two C<sub>4</sub> PFP's remains to be determined. A related question concerns the basis for the differential rates of the forward and reverse reactions catalyzed by the mesophyll and bundle sheath preparations. Based on the current results, it would seem that the bundle sheath enzyme is ideally suited to function in the reverse direction (sucrose synthesis), whereas the mesophyll enzyme would function mainly in the Fru-2,6-P<sub>2</sub> dependent direction (sucrose breakdown).

## 5. ACKNOWLEDGEMENT

This research was supported by a grant-in-aid from Chevron Chemical Company.
