INTRODUCTION
Ben Jennings, Chris Gaffney, Tom Sparrow and Sue Gaffney

12th INTERNATIONAL CONFERENCE OF ARCHAEOLOGICAL PROSPECTING COMMITTEE MEMBERS

THE USE OF DIGITAL MOBILE TECHNOLOGIES FOR GEOARCHAEOLOGICAL SURVEY: THE EXAMPLES OF THE PINILLA DEL VALLE RAW MATERIALS PROJECT
Ana Abrunhosa, João Cascoteira, Alfredo Pérez-González, Juan Luis Arreseiga and Enrique Baquedano

A MULTI-METHODOLOGICAL APPROACH ON A HISTORIC WALL STRUCTURE OF HEPTAPYRIGON FORTRESS THESSALONIKI GREECE: A CASE STUDY
Dimitrios Angelis, Panagiotis Tsouras, Gregory Tsokas, George Vargemis and Georgia Zacharopoulou

SETTLING SELECTION PATTERNS AND SETTLEMENT LAYOUT DEVELOPMENT IN THE CHALCOLITHIC CUCUTENI CULTURE OF NORTH-EASTERN ROMANIA. INTERPRETATION AND PRESENTATION OF PROSPECTION RESULTS
Andrei Asândulescu, Felix Adrian Tencariu, Mihaela Asândulescu and Radu Ştefan Balaur

MONITORING MARINE CONSTRUCTION ZONES THROUGH THE ITERATIVE USE OF GEOPHYSICS AND DIVING
P A Baggaley, L H Tizard and S H L Arnott

GEOPHYSICAL STUDIES IN MAYA SITES OF THE CARIBBEAN COAST, QUINTANA ROO, MEXICO
Luis Barba, Jorge Blancas, Agustín Ortiz, Patricia Mekhaan, Roberto Magdaleno and Claudia Troje

INVESTIGATIONS OF ÉSIE STEATITE STRUCTURES USING GEOPHYSICAL, PETROLOGICAL AND GEOTECHNICAL TECHNIQUES
A M Bell, V Makinde, O Mustapha and M Gbadlebo

REVEALING THE TOPOGRAPHY OF THE ANCIENT KITION (LARNACA, CYPRUS): AN INTEGRATED APPROACH
Christophe Breugel, Marine Audibert, Antoine Chevalier, Lionel Daras, Sébastien Flageul, Sabine Fourrier, Alexandre Rabot, Fayçal Réjiba, Cyril Schamper and Moin Tabbagh

3D INDUCED POLARIZATION AND ELECTRICAL RESISTIVITY TOMOGRAPHY SURVEYS FROM AN ARCHAEOLOGICAL SITE
Menic Aaz Borge and Mahmut Gökşen Drahra

LOOKING FOR THE ANCIENT NILE BANKS AND THEIR RELATIONSHIP WITH A NEOLITHIC SITE: THE EXAMPLE OF KADRIUKA (SUDAN)
Yves Bére, Pierrick Mattamon, Ludovic Bodet and Julien Thésson

THE FORGOTTEN CASTLE OF THE CIOCKE FAMILY IN ŻELECHÓW, MAZOWIECKIE PROVINCE, POLAND
Wojciech Bis, Tomasz Herbich and Robert Ryndziewicz

LIVING IN A POST-WORK HORSE WORLD: OBSERVATIONS LEARNT FROM RAPIDLY ACQUIRED ELECTROMAGNETIC INDUCTION SURVEYS IN IRELAND (WHEN MAGNETOMETRY JUST WON'T DO...)
James Bonsall

THE MAGNETIC SIGNATURE OF OHIO EARTHWORKS
Jarrod Burks

THREE HUNDRED MILES IN THE FOOTSTEPS OF VESPAVIAN ... AND THE ANCIENT MONUMENTS LABORATORY
Paul Cheetham, Dave Stewart and Harry Monley

IDENTIFICATION OF BURIED ARCHAEOLOGICAL FEATURES THROUGH SPECTROSCOPIC ANALYSIS
Yoon Jung Choi, Johannes Lample, David Jordan, Sabine Fiedler and Thomas Wagner

INTEGRATION OFGROUND-PENETRATING RADAR AND MAGNETIC DATA TO BETTER UNDERSTAND COMPLEX BURIED ARCHAEOLOGY
Lawrence B Conyers

ARCHAEOLOGICAL PROSPECTION OF MEDIEVAL HARBOURS IN THE NORTH ATLANTIC
Joris Coolen, Natasha Meader, Dennis Wilken, Ronny Weijling, John Preston, Tina Wunderlich and Peter Felders

RE-VISITING SUTTON HOO: REVEALING NEW ELEMENTS OF THE PRINCELY BURIAL GROUND THROUGH GROUND AND AERIAL REMOTE SENSING
Alexander Corkum, Cathy Bahl, Innis Davis, Chris Gaffney, Mike Loughton and Thomas Sparrow

USING GEOPHYSICAL TECHNIQUES TO ‘DIG DEEP’ AT GRAVE CREEK MOUND FOR CULTURAL RESOURCE MANAGEMENT
Alexander Corkum, Cathy Bahl, Innis Davis, Chris Gaffney, and Thomas Sparrow

GEOLOGICAL AND PEDOLOGICAL ARTEFACTS WITHIN UK MAGNETIC GRADIOMETER DATA FOR ARCHAEOLOGICAL PROSPECTION
Edward Cox and Rebecca Davies

MOVING BEYOND AN IDENTIFICATION OF ‘FERROUS’: A RE-INTERPRETATION OF GEOPHYSICAL SURVEYS OVER WW1 PRACTICE TRENCHES ON SALISBURY PLAIN
Nicholas Crab, Paul Baggaley, Lucy Learmonth, Rok Plesničar and Tom Richardson

IN SEARCH OF THE LOST CITY OF THEOMANIE: A NEW INTEGRATED APPROACH
Michel Dabus, François Bluy, Laurent Froidevaux and Richard Jonvel

SUBSURFACE GEOPHYSICAL APPROACHES TO UNDERSTANDING NORTHERN PLAINS EARTHWORKS
Ritika A Dolan, George R Holley, Kenneth L Kvanne, Mark D Mitchell and Jay Sturdevant
GEOPHYSICS IN IRAQI KURDISTAN: DISCOVERING THE ORIGINS OF URBANISM
Lionel Darras, Christophe Benech and Régis Vallet

AUGMENTING THE INTERPRETATIVE POTENTIAL OF LANDSCAPE-SCALE GEOPHYSICAL DATA – A CASE FROM THE STONEHENGE LANDSCAPE
Philippe De Smedt, Henry Chapman and Paul Garwood

MEDITERRANEAN SITES IN ARCHAEOLOGICAL PROSPECTION: THE CASE STUDY OF OSOR, CROATIA
Nives Doneus, Petra Schniedenhofe, Michaeli Doneus, Manuel Gabler, Hanses Schiel, Viktor Jansa and Matthias Kucera

TRANSFORMING THE SEARCH FOR HUMAN ORIGINS USING NEW DIGITAL TECHNOLOGIES, LOW ALTITUDE IMAGING, AND CITIZEN SCIENCE
Adrian Evans, Thomas Sparrow, Louise Leaky, Andrew Wilson, Randy Donahue

MAGNETOMETER PROSPECTION OF NEO-ASSYRIAN SITES IN THE PESHDAR PLAIN, IRAQI KURDISTAN
Jörg W. E. Fasbinder, Andrea Asündulesci, Karen Rodhes, Janoscha Krepiner and Andreas Sulzer

INTEGRATED GEOPHYSICAL PROSPECTION IN A HITITE EMPIRE CITY (sapinuwa)
Mehmet Göktuğ Drahor, Meriç Aze Berge, Caner Öztürk, Bukek Ortom, Atilla Onar, Ayşel Soel, Sedef Ayvildic, Önder Şeref Anonver and Funda Kök

MARINE SEISMICS ALONG THE KANE PENINSULA,
Erinika Fedult, Dennis Willer, Tim Wunderlich and Wolfgang Rabbel

OUT OF THE BLUE: EXPLORING LOST FRONTIERS IN DOGGERLAND
Simon Fitch

INVESTIGATION AND VIRTUAL VISUALISATION OF A PROBABLE BURIAL MOUND AND LATER MOTTE-AND-BAILEY CASTLE FROM LOWER AUSTRIA
Roland Fitzweser, Leopold Toriser, Juan Torrejón Valdecamar and Wolfgang Neubauer

ARCHAEOLOGICAL VALIDATION OF GEOPHYSICAL DATA: RISKS OF THE ARCHAEOLOGICAL INTERPRETATION
Ekhine Garcia-Garcia, Antonella Letra, Roger Sola, Arantza Aranburu, Julian Hill and Juanito Aguirre-Mallorco

Sébastien Gondet

AUTOMATION, AUTOMATION, AUTOMATION: A NOVEL APPROACH TO IMPROVING THE PRE-EVACUATION DETECTION OF INHUMATIONS
Ashley Green, Paul Cheetan and Timothy Darvill

NON-INVASIVE INVESTIGATIONS AT EARLY MEDIEVAL STRONGHOLDS IN LUBUSIE PROVINCE (WESTERN POLAND)
Bartholomej Grzanka and Lukasz Pospieszny

GEOPHYSICAL AND GEOCHEMICAL DEFINITION OF A RURAL MEDIEVAL CHURCHYARD AT FURULUND, HEDMARK, NORWAY
Lars Gustafsson, Rebecca J S Connell, Monica Kristiansen and Erik Nau

ASSESSING THE EFFECT OF MODERN PLOUGHING PRACTICES ON ARCHAEOLOGICAL REMAINS BY COMBINING GEOPHYSICAL SURVEYS AND SYSTEMATIC METAL DETECTING
Lars Gustafsson, Monica Kristiansen, Erik Nau and Bernt Egil Tafford

NEBELIUKA, UKRAINE: GEOPHYSICAL SURVEY OF A COMPLETE TYPHILIA MEGA-SITE
Duncan Hare, John Chapman, Mikhail Yedko, Biserka Gaydarska, Natalia Buro, Richle Hillis, Natalie Swann, Patricia Voke, Nathan Thomas, Andrew Bialik, Ashley Bryant, Marco Nebbia, Andrew Millard and Vitaliy Rud

GEOPHYSICAL PROSPECTION IN THE NATAL LANDSCAPE OF THE BUDDHA, SOUTHERN NEPAL
Duncan Hare, Robin Coningham, Kosh Prasad Acharya, Mark Manuel, Chris Davis and Patricia Voke

A LARGESCALE SIMULTANEOUS MAGNETOMETER AND ELECTROMAGNETIC INDUCTION SURVEY AT SITNA HILFORD, SLOVENIA
Chrys Harris, Ian Armit, Finnegn Pope-Carter, Graeme Atwood, Lindsey Bluster and Chris Gaffney

GEOPHYSICAL SURVEYS IN EGYPT AND SUDAN PERIODICAL REPORT FOR 2015-2016
Tommy Herich

NOT SO GOOD VIBRATIONS: REMOVING MEASUREMENT INDUCED NOISE FROM MOTORIZED MULTI-SENSOR MAGNETOMETRY DATA
Alois Hinterleitner, Immo Trinkle, Klaus Lööcker, Jakob Kaln, Ralf Totschning, Matthias Kucera and Wolfgang Neubauer

ELECTROSTATIC AND GPR SURVEY: CASE STUDY OF THE NEUVILLE-AUX-BOIS CHURCH (LOIRET, FRANCE)
Guillaume Hulin, Francois Cupron, Sebastien Pioguel, Francois-Xavier Simon and Alain Tobbagh

MEDIEVAL MONKS SEEN THROUGH A MODERN LANDSCAPE
Freya Horsfield

CHANGING FACES: ARCHAEOLOGICAL INTERPRETATIONS AND THE MULTI-STAGE ARCHAEOLOGICAL PROSPECTION OF THE ROMAN TOWN OF AREGENA
Karina Jorde, Armin Schmidt, Michel Dabas and Roger Sala

FROM LARGE- TO MEDIUM- TO SMALL- SCALE GEOPHYSICAL PROSPECTION
Jakob Kaln

Meninx – geophysical prospection of a Roman town in Jerba, Tunisia

Lena Lambers[1, 2], Jörg W E Fassbinder[1], Stefan Ritter[3] and Sami Ben Tahar[4]

ls.l.kuhne@arch.leidenuniv.nl

Meninx, located in the southern part of the island of Jerba, was an important Roman harbour and one of the largest production sites of purple dye in antiquity. Existing since Punic times, the city experienced its cultural and economic heyday in the 2nd and 3rd centuries AD. The site extends ca. 1.7 km along the coast and ca. 200 to 600 m inland. However, it is still unclear how far it extends under water.

Since the 19th century, sporadic excavations near the supposed forum and outside the city were undertaken. From 1996 to 2006 Meninx was included in the research project ‘An Island through Time: Jerba Studies’, during which comparatively small areas in the centre of the site were excavated (Drine et al. 2009). These excavations were accompanied by limited magnetometer measurements in the centre around the basilica and the macellum.

In the framework of the new project ‘The urban structure of the ancient town of Meninx’ by the Ludwig-Maximilians University (LMU) Munich, a large-scale magnetometer prospection was conducted in 2015. The results provided the first coherent picture of the extensive core area of the ancient city that extends along the coast. For measurement we applied the Scintrex SM4G-Special Caesium magnetometer in a handheld duo-sensor configuration with a sensitivity of ±10 pT, and a sampling rate of 25 x 50 cm, interpolated to 25 x 25 cm. The configuration allowed us to cover almost the entire surface regardless of the extremely uneven topography, ruins, piles of rubble and sand as well as bushes and little trees which cover the area.

Results

Contrary to earlier assumptions based on some of the excavation results, the magnetogram shows no orthogonal street system in the old city centre of Meninx. While the streets themselves are not always clearly visible, the alignment of the buildings shows their layout throughout the city. Also, the position of the forum is not as clear as earlier research suggested.

Although the partly excavated basilica is covered with pieces of highly magnetic rocks, it was possi-

![Figure 1: Magnetic map of the survey area. Smartmag SM4G-Special caesium-magnetometer, sensitivity ±10 pT, duo-sensor configuration, sampling rate 25 x 50 cm, interpolated to 25 x 25 cm.](image-url)
Figure 2: Classification and interpretation of the magnetogram based on magnetic value.

...ble to connect linear anomalies with column bases. Some columns are still visible above ground while others are not. For interpretation of data it was important to note that the columns and some of the representative buildings were made of marble and thus feature "negative" magnetic susceptibility. As a result, some large column fragments lying on the surface in the westernmost part of the site with a diameter of 80 cm and a length of up to 5 m long clearly show as a strong dipole anomaly as if they were pieces of iron.

The theatre is still visible on the surface through its huge debris and sand layers. In the magnetogram the substructures made of marble and other stones are clearly visible. Even parts of the stage are preserved, probably partly made of burned bricks. An enclosed area marked by piles behind the cavea seems to belong to the theatre setting. Connected to the theatre on its south-eastern side are several storehouses, joined by several cisterns a little further away, of which four were previously excavated.

The building south-east of the basilica seems to feature tabernae along the street, while the magnetic values from ±5 - ±20 nT seem to indicate organic material in the context of these rooms. Similar tabernae surround the macellum in the south. Some of them even have values up to ±50 nT, indicating either floor heating or cooking in these rooms. Northeast of the macellum is another storehouse.

In a south-eastern direction our survey was limited by the coastline. If the city centre continued towards the south-west and if a former harbour was located there, its location will require an extended sonar survey.

Thanks to the interpretation based on the magnetic value, certain details of the site plan can be depicted very clearly, such as the different ranges of mag-
netization of the shops in the *macellum* mentioned above, which indicate different uses of the rooms. At first glance, positive values of two buildings in the city centre seemed to indicate an earlier construction phase with burned bricks or rocks with higher magnetic susceptibility than those of limestone. But the elevation map revealed that the higher values in the magnetogram are caused by the surrounding material. The thick debris layers contain a lot of diamagnetic shell waste material from the purple dye production during late antiquity. Thus, these buildings are covered by less magnetic material than the stone buildings themselves.
