HOMEOPATHY AS A PARAGON OF SUSTAINABLE MEDICINE: CULTURO- PHILOSOPHICAL PERSPECTIVES

Josef M. Schmidt

Abstract ID: 132

Event: LMHI Conference 2018 (Phase 2)

TOPIC 5: Healthcare Systems

Keywords: Homeopathy, sustainability, science, philosophy, ethics

Considering the limits of growth, the dialectic of modern Western rationality, and the urgent need for complementary paradigms of science, today homeopathy may gain new relevance as a paragon of sustainable medicine. It provides a holistic conception of medicine, a rational, phenomenologic, semiotic, heuristic-hermeneutic, individual and human approach to each patient, covers ethical and sociopolitical dimensions, and avoids exploitation and contamination of nature and animal tests.
