CONTENTS

SPECIMEN PREPARATION AND MEASUREMENTS

Sample preparation and methodology

Fluorescence imaging of mitochondrial compartment in chondrocytes cultured on microporous membranes
   X. Ronot

Comparative flow cytometric (FCM) and static cytometric (SCM) estimation of the DNA content of reference cell populations according to the method of fixation
   F. Duigou, P. Herlin, J.L. Liu, E. Masson, A.M. Grivaut, D. Bloyet and A.M. Mandard

Influence of smears preparation and fixatives on DNA ploidy and morphonuclear features of the MXT mouse mammary tumor and normal murine tissues
   Y. de Launoit, R. Kiss, S. Gras and A. Danguy

Analysis of DNA-texture in wet unfixed cell material applying UV-microscopy
   G. Sträße and S. Witte

Methodological problems in the determination of the 2C-DNA reference in single cell digital videodensitometry. Application to paraffin-embedded specimens
   D. Kindermann, C. Schmitz, M. Bischoff and U. Pfeifer

Flowcytometric DNA-ploidy determination of soft tissue sarcoma. A comparison of three different sampling methods
   M. Fernö, B. Balderorp and M. Åkerman

Reliability of different sampling methods used with selective graphic tablet morphology
   J.C. Fleege, P.J. van Diest and J.P.A. Baak

Comparison between image cytometry (ICM) and flow cytometry (FCM) in measurements of nuclear DNA content in gynecologic cancer

A comparison of flow cytometry and image cytometry for estimation of nuclear DNA content in digestive tumors

Assessment of automatic bone histomorphometry: Comparison with manual method
   R. Juvin, E. Camus, Y. Usson and X. Phelip

Analysis of DNA histograms
   B. Stenkvist

The potential implication and prerequisites of morphometry in diagnostic work
   M. Oberholzer, H. Christen, M. Buser, R. Gschwind and R. Ettlin

Nuclear DNA content evaluation by quantitative fluorescence image analysis

Comparative study of ten fluorescent dyes
   M.S. Santisteban, M.P. Montmasson, F. Giroud and G. Brugal
Software and hardware tools

Evaluation of a quantitative microscope for image cytometry
  B. Jaggi, S.S.S. Poon, B. Pontifex, J.J.P. Fengler and B. Palcic 31

Image analysis using an IBM PC
  S. Hempfer, W. Stolz and W. Abmayr 33

Cell image segmentation and analysis aided by a modified problem adapted
color transformation
  H. Harms 35

Real colour in processing methods for cell analysis
  F.X. Strobl and G.J. Weiss 37

Evaluation of two computerized methods for locating the nucleolus in the cell
nucleus
  C. Lesty, L. Vincent, M. Raphael, C. Cheq and J. Binet 39

Informatics in pathology. Software developed by the TEXCAN-group
  O. Ferrer-Roca and J.A. Martin 41

How to quantify groups of objects?
  K. Rodenacker 43

Three-dimensional structure analysis in cellular pathology by laser confocal
microscopy and point process modelling
  D. König, S. Carvajal-Gonzalez, A.M. Downs, J.P. Rigaut and J. Vassy 45

3D-microscopy: Quantitative approaches
  P. Schwarzmann and X. Wu 47

CELL BIOLOGY

Cell kinetics

Analysis of murine B-cell activation and cell-cycle progression using high
resolution flow cytometry
  H. Seyschab, H. Hoehn, P.S. Rabinovitch and U. Chen 51

AT-specific DNA ligands provoke arrest in the G2 phase of the cell cycle and
frequent chromosome polyploidisation
  J. Köhler, K. Kausch, T. Haaf, H. Hoehn and M. Poot 53

Image analysis of simultaneous bromodeoxyuridine and DNA labelling:
Replication texture patterns through S phase
  C. Humbert, Y. Usson and G. Brugal 55

Bromodeoxyuridine uptake of cells in different growth conditions in culture and
in xenotransplants
  H. Baisch, K. König and U. Otto 57

Cell kinetic evidence suggests elevated oxidative stress in cells from Bloom’s
syndrome
  M. Poot, H.W. Rüdiger, D. Schindler and H. Hoehn 59

Cytogenetics

Rapid diagnosis of chromosomal breakage syndromes using bivariate
BrdU/Hoechst flowcytometry
  H. Seyschab, D. Schindler, M. Poot, M. Kubbies, A. Schinzel, J.-P. Fryns,
  N. Tommerup, M. Nenadov, P.S. Rabinovitch and H. Hoehn 63
Performance of a semiautomatic system for chromosome analysis in scoring aberrations: Application to analyze the effect of low-level 50 Hz electromagnetic fields on human chromosomes in vitro

INTRODUCTION
The usefulness of a new approach, termed interphase cytogenetics (1), was recently demonstrated in studies of malignant solid tumors by the detection of numerical and structural aberrations of specific chromosomes in nuclei from in vitro cultivated neuroectodermal tumor cell lines (2). We applied this approach to paraffin-embedded tissue sections using a biotin-labeled DNA probe, specific for 1ql2 (3), to investigate whether a numerical aberration of this region is also present in primary surgical tumor tissue and in precancerous cells (carcinoma-in-situ, CIS). Furthermore a protocol for the in situ hybridization of the 1ql2-specific probe to isolated nuclei in suspension allowed us to investigate premeiotic germ cells, present in semen from patients with fertility problems or manifest germ cell tumors.

MATERIAL AND METHODS
They were described elsewhere:
Xenografts. Walt et al. (4).
Cell cultures. Hofmann et al. (5).
Preparation of semen samples. Jauch et al. (6).
Tissue preparation. Emmerich et al. (7).
DNA probe. Cooke and Hindley (3).
Hybridization techniques. Jauch et al. (6), Emmerich et al. (7).

RESULTS AND DISCUSSION
Metaphase spreads and interphase nuclei from cell lines of testicular tumors showed in 80% three hybridization signals (Fig. 1a). In tissue sections from corresponding xenografts, trisomy for the region 1ql2 could be confirmed (Fig. 1b). In situ investigations of primary tissue from patients with germ cell tumors showed that both tumor cells and CIS cells, found adjacent to the manifest tumor, often (CIS 30%) contained nuclei with three hybridization signals (Fig. 1c,d).
With above approaches we hope to establish new avenues in order to recognize earliest stages of human testicular germ cell tumors.
Fig. 1a-e. Various specimens after in situ hybridization with biotinylated probe pUC1.77 and peroxidase-detection. a: Metaphase of a malignant testicular germ cell from a tumor cell line. b-d: Paraffinsection through a xenograft (b); a human testicular teratocarcinoma (cartilage, c); a seminiferous tubule with CIS (d). e: Exfoliated premeiotic germ cells from semen of a patient with Oligo-astheno-terato-zoospermia. All specimens show cells with increased numbers of chromosome 1.

ACKNOWLEDGEMENT

These studies were supported by the Krebsliga des Kantons Zürich.
